Five Stuart Tragedies. Edited with an Introduction by A. K. McIlwraith

How do you discern true vs. false Christianity? In the days of the Protestant Reformation, the core tenets of the faith were strenuously examined. In the end, the Reformers maintained that at the heart of the Christian faith stood five main credos: sola Scriptura, sola gratia, sola fide, solus Christus, and soli Deo gloria. This book examines these five "solas" and makes a definitive case for why we're Protestant.

Qualitative Inquiry and Research Design

As practitioner-researchers, how do we discuss and analyse our work without losing the creative drive that inspired us in the first place? Built around a diverse selection of writings from leading researcher-practitioners and emerging artists in a variety of fields, *The Creative Critic: Writing as/about Practice* celebrates the extraordinary range of possibilities available when writing about one's own work and the work one is inspired by. It re-thinks the conventions of the scholarly output to propose that critical writing be understood as an integral part of the artistic process, and even as artwork in its own right. Finding ways to make the intangible nature of much of our work 'count' under assessment has become increasingly important in the Academy and beyond. *The Creative Critic* offers an inspiring and useful sourcebook for students and practitioner-researchers navigating this area. Please see the companion site to the book, <http://www.creativecritic.co.uk>, where some of the chapters have become unfixed from the page.

A comprehensive yet concise introduction to central topics, debates, and techniques of moral philosophy in the analytic tradition, this volume combines a thematic, issue-oriented format with rigorous standards of clarity and precision. Thomas introduces fundamental concepts and terms, proceeding through a step-by-step exploration of five general areas of debate: the specification of moral judgment; moral judgment and the moral standard; the justification of moral judgment; logic, reasoning, and moral judgment; and moral judgment and moral responsibility. Key historical and contemporary figures in moral philosophy, including Plato, Aristotle, Kant, Hume, Mill, Hare, Ross, Nagel, Foot, Stevenson, and Dancy, are used effectively as a means of examining the topics themselves.

Why We're Protestant

This book is intended for class teachers (and trainee teachers) in primary schools who wish to teach religious education well but are unclear as to how they might. It maps out the changes that have taken place over the last few years with regards to the aims and objectives in the subject.

An Introduction to Mathematical Modeling

One of his six introductions to philosophy, widely used by students in Alexandria, Ammonius' lecture on Porphyry was recorded in writing by his students in the commentary translated here. Along with five other types of introductions (three of which are translated in the Ancient Commentators on Aristotle volume Elias and David: Introductions to Philosophy with Olympiodorus: Introduction to Logic) it made Greek philosophy more accessible to other cultures. These introductions became standard in Ammonius' school and included a popular set of five or more definitions of philosophy, some of them drawn from commentaries on quite different works. Ammonius'

lecture expounded the most celebrated and discussed previous introduction written by Porphyry 200 years earlier, which was devoted to five main technical terms of Aristotle's logic. Ammonius was sympathetic to Porphyry because they both sought to harmonise the views of Plato and Aristotle with each other, arguing in different ways that the two philosophers did not disagree about the nature of universals. Porphyry's introduction was a hugely influential work for centuries after its composition, and this commentary by Ammonius served to maintain its position at the centre of later schools of philosophy. This English translation of Ammonius' work is the latest volume in the Ancient Commentators on Aristotle series and makes this philosophical work accessible to a modern readership. The translation is accompanied by an introduction, comprehensive commentary notes, bibliography, glossary of translated terms and a subject index.

An Introduction to Global Studies

The poetic books of the Old Testament--Job, Psalms, Proverbs, Ecclesiastes, Song of Solomon--are often called humankind's reach toward God. The other books of the Old Testament picture God's reach toward man through the redemptive story. Yet these five books reveal the very heart of men and women struggling with monumental issues such as suffering, sin, forgiveness, joy, worship, and the passionate love between a man and woman. C. Hassell Bullock, a noted Old Testament scholar, delves deep into the hearts of the five poetic books, offering readers helpful details such as hermeneutical considerations for each book, theological content and themes, detailed analysis of each book, and cultural perspectives. Hebrew is a language of "intrinsic musical quality that naturally supports poetic expression," says Bullock in his introduction. That poetic expression comes from the heart of the Old Testament writers and reaches all of us exactly where we are in our own struggles and joys.

This second, revised edition of a pioneering volume, long out of print, presents translations of Japanese Zen poems on sorrow, old age, homesickness, the seasons, the ravages of time, solitude, the scenic beauty of the landscape of Japan, and monastic life. Composed by Japanese Zen monks who lived from the last quarter of the thirteenth century to the middle of the fifteenth century, these poems represent a portion of the best of the writing called in Japanese *gozan bungaku*, “literature of the five mountains.” “Five mountains” or “five monasteries” refers to the system by which the Zen monasteries were hierarchically ordered and governed. For the monks in the monasteries, poetry functioned as a means not only of expressing religious convictions and personal feelings but also of communicating with others in a civilized and courteous fashion. Effacing barriers of time and space, the practice of Chinese poetry also made it possible for Japanese authors to feel at one with their Chinese counterparts and the great poets of antiquity. This was a time when Zen as an institution was being established and contact with the Chinese mainland becoming increasingly frequent—ten of the sixteen poets represented here visited China. Marian Ury has provided a short but substantial introduction to the Chinese poetry of Japanese *gozan* monasteries,

What does it mean to believe in God? What passes as evidence for belief in God? What issues arise when considering the rationality of belief in God? Debating Christian Religious Epistemology introduces core questions in the philosophy of religion by bringing five competing viewpoints on the knowledge of God into critical dialogue with one another. Each chapter introduces an epistemic viewpoint, providing an overview of its main arguments and explaining why it justifies belief. The validity of that viewpoint is then explored and tested in a critical response from an expert in an opposing tradition. Featuring a wide range of different philosophical positions, traditions and methods, this introduction: - Covers classical

fundamental processes involved in psychological development, the book starts with a study of the way in which the young child adapts its behaviour to its environment. This study considers some of the key aspects of physical development, mainly the central nervous system. At the same time the way physical growth and psychological development are influenced by the experience of the individual is also discussed. This discussion of development is followed by an examination of the processes of learning, with particular attention paid to the works of Piaget. The salient points of each chapter are brought together in a summary which may be used by the reader to obtain a preliminary overview of the content of the chapter, and as an aid to revision.

Five Ways to Make Architecture Political presents an innovative pragmatist agenda that will inspire new thinking about the politics of design and architectural practice. Moving beyond conventional conversations about design and politics, the book shows how recent developments in political philosophy can transform our understanding of the role of the architect. It asks: how, when, and under what circumstances can design practice generate political relations? How can architectural design become more 'political'? Five central chapters, which can be read alone or in sequence, explore the answers to these questions. Powerfully pragmatic in approach, each presents one of the 'five ways to make architecture political', and each is illustrated by case studies from a range of contemporary situations around the world. We see how politics happens in architectural practice, learn how different design technologies have political effects, and follow how architects reach different publics, trigger reactions and affect different communities worldwide. Combining an accessible introduction to contemporary political concepts with a practical approach for a more political kind of practice, this book will stimulate debate among students and theorists alike, and inspire action in established and start-up practices.
