Busy Bea

This is an autobiography-cum-business book by John Sculley, one of the most successful businessmen in America, who became Pepsi's president and CEO at the

age of 38. At the height of his success with Pepsi he joined the high-risk young Apple, co-founded by a young genius named Stephen Jobs. This book describes the turbulent relationship between Jobs and Sculley, their break-up over the future of Apple, and the eventual transformation of Apple into one of the most unconventional and dramatic success stories in business history. It offers an insight into the emotions and personal drama of life at the top.

Endobronchial Ultrasound-Guided Transbronchial Needle Aspiration (EBUS-TBNA): A Practical Approach

“Classic Moggach: readable, memorable . . . an unashamedly colorful journey across continents, with clothes, food, landscapes brought joyously to life.” —The Times (London) “Nobody in the world knows our secret . . . that I’ve ruined Bev’s life, and she’s ruined mine.” Petra’s romantic life has always been a car crash, and even in her sixties she’s still getting it disastrously wrong. And then she falls in love with Jeremy, an old friend visiting from abroad. There’s just one catch: Jeremy is married to her best friend, Bev. Meanwhile, on opposite sides of the world, two other women are also struggling with the weight of betrayal: Lorrie, a Texan, is about to embark on the biggest deception of her life, and in China, Li Jing is trying to understand exactly what it is her husband does on his business trips. It turns out that no matter where you are in the world or how well you think you know the one you love, everyone has secrets.

Freak of Nature

Magnus lives and works at the Broadway Firehouse. He knows that when the fire alarm clangs, he and his partners, Billy and Sparks, are supposed to spring into action. Without them the firemen would never be able to move the gigantic steam

pumper. And without a pumper the crew wouldn't be able to put out fires. Then one day the captain drives into the firehouse on a loud, newfangled contraption called a motorized fire truck. It doesn't need horses to pull it to a fire. So just like that, Magnus, Sparks, and Billy are out of a job. A little history, a little humor, and a whole lot of heart are artfully blended in this rousing tale of one high-spirited horse who can't accept being put out to pasture. And thank goodness! Because it's this steadfast sense of duty that ultimately saves the day.

Help Nancy and her friends find a prop that's gone missing from a superhero movie set in the fifth book in an interactive Nancy Drew chapter book mystery series. Grab a piece of paper and get ready to jot down your own ideas and solutions to the case! School is out for summer and the timing is great because a movie is filming in River Heights, and Nancy, Bess, and George—along with a bunch of their classmates—get to be extras in a scene shot at the playground! The movie features Glam Girl, a fashion-forward superhero who gets her powers through her clothes. When the girls arrive on set, they catch a glimpse of the super shoes that give Glam Girl the ability to run, jump, and kick with super-speed. An assistant explains to them that there is only one pair in existence and that they were custom-made for the actress Shasta's feet. Everyone goes wild as Glam Girl runs into the playground, blue shoes glimmering. But when Shasta's on a between-scenes break, the shoes go missing! The director says that if the shoes aren't found,

they'll be leaving River Heights and their scene won't make it into the movie! Good thing Nancy happens to have her most important prop right in her pocket—her clue book. Who took the blue super shoes? Was it Paloma Garva, who needs a pair of blue shoes for her Junior Fashion Show? Was it Rosie the stunt-woman, who seems to envy Shasta's spotlight? Or was it the Popcorn Peeps, their classmates' film club, who need movie relics for their new museum?

A Bigger Picture

Malcolm Turnbull, Australia's 29th Prime Minister, tells the remarkable story of his life in this lively political page-turner. When Malcolm Turnbull took over the nation's top job there was a sense of excitement in Australia. Sky-high opinion polls followed as the political outsider with a successful business, legal and media career took charge. The infighting that dogged politics for the best part of a decade looked to be over. But a right-wing insurgency brutally cut down Turnbull's time in office after three years, leaving many Australians asking, 'Why?' Exceptionally

candid and compelling, *A Bigger Picture* is the definitive narrative of Malcolm Turnbull's prime ministership. He describes how he legalised same-sex marriage, established Snowy Hydro 2.0, stood up to Donald Trump, rebooted Australia's defence industry and many more achievements - remarkable in their pace, significance and that they were delivered in the teeth of so much opposition. But it's far more than just politics. Turnbull's life has been filled with colourful characters and controversies, success and failure. From his early years in Sydney, growing up with a single father, to defending 'Spycatcher' Peter Wright against the UK Government; the years representing Kerry Packer, leading the Republican Movement and making millions in business; and finally toppling Tony Abbott to become Prime Minister of Australia. For the first time he tells it all - in his own words. With revelatory insights on the workings of Canberra and the contentious events of Turnbull's life, *A Bigger Picture* explores the strengths and vulnerabilities of one of Australia's best-known and dynamic business and political leaders. Lyrically written in highly readable and entertaining prose, this is a genuine page-turner that's not just for political junkies.

This high-yield reference book focuses on the clinical, technical, and pathological aspects of endobronchial ultrasound-guided transbronchial needle aspiration (EBUS-TBNA). Its reviews cover all aspects of EBUS-TBNA, including the clinical perspective, technical aspects of the procedure, and cytomorphology of common and uncommon entities, as well as highlights diagnostic challenges. Each chapter features a multitude of full-color high-resolution images and includes key references to the current literature in the field. Additionally, reference tables and informative figures highlight the salient points. The book is unique in that it is written by experienced thoracic surgeons, pulmonary medicine physicians, and cytopathologists who use EBUS-TBNA in a large medical center. This publication is of interest to individuals learning and practicing cytopathology, in addition to clinicians practicing pulmonary/thoracic medicine or surgery. In short, it provides important pearls of wisdom to create a comprehensive reference for all physicians involved with EBUS-TBNA.

This text provides expert instruction on the varying surgical techniques currently employed for the regeneration of the ocular surface. Corneal Regeneration: Therapy and Surgery begins with a thorough discussion of current research based on data obtained in clinical human studies, and discusses the potential clinical implications for this promising new stage of eye surgery. Sections devoted to the stem cell, regenerative surgery and therapy of the ocular surface epithelium, corneal stroma, and corneal endothelium follow, each section comprehensively covering applied anatomy, current therapy and regenerative techniques, with a look to future directions of the field including eventual cell therapy. Corneal Regeneration: Therapy and Surgery is the first book of its kind, systematically covering the developments the medical community has achieved in corneal regeneration from all angles. Written and edited by leading experts in the field, researchers and ophthalmologists alike will find this to be a unique source of information on corneal regeneration, as well as a thoughtful reflection on potential applications of regenerative surgery in ophthalmology as a whole.

Pediatrics for the Practical Nurse

Modern approaches to Roman imperialism have often characterized Romanization as a benign or neutral process of cultural exchange between Roman and non-Roman, conqueror and conquered. Although supported by certain types of literary and archaeological evidence, this characterization is not reflected in the visual imagery of the Roman ruling elite. In official imperial art, Roman children are most often shown in depictions of peaceful public gatherings before the emperor, whereas non-Roman children appear only in scenes of submission, triumph, or violent military activity. Images of children, those images most fraught with potential in Roman art, underscore the contrast between Roman and non-Roman and as a group present a narrative of Roman identity. As Jeannine Diddle Uzzi argues in this 2005 study, the stark contrast between images of Roman and non-Roman children conveys the ruling elite's notions of what it meant to be Roman.

Introduction to Time Series Analysis and Forecasting Solutions Set

Excerpt from Aeration and Air-Content: The Role of Oxygen in Root Activity In spite of the enormous amount of work done upon the respiration of roots and the significance of soil-air, physiologists and ecologists generally have ignored this subject or have given it little consideration. A cursory survey of a score of text-

books shows that the air-content of the soil is not even mentioned by the majority, while it is given slight attention by a few, and accorded recognition as a factor of primary importance by three or four only. This was probably a natural outcome of the laboratory development of physiology. At least, it appears certain that the basic importance of the air-content of the soil could not be appreciated fully until ecology had begun the instrumental measurement of the habitat. Even the latter has found it difficult to distinguish between sequelae and causes in this field (plant Succession, p. And general recognition of air-content as a primary factor in many habitats, and a controlling one in wet soils and water, is yet to come. In the following treatise, the development of our knowledge of the respiration of roots and other underground parts is first taken up in historical sequence, together with an account of studies dealing with the nature and composition of soil-air. This is succeeded by a digest of results in the field of anaerobic respiration, with especial reference to its relation to germination, growth, and movement. A section is devoted to bog xerophytes and swamp plants, with which are considered bog toxins and acid soils, while soil toxins and toxic exudates are discussed in a final section.
