Save a fortune on great-performing customized car speakers. If done by an installer, custom speakers can run to thousands of dollars and your satisfaction isn't necessarily guaranteed. The best solution is to build your own. Car Stereo Speaker Projects Illustrated, by Dan Ferguson, is the one and only illustrated project book that will take you step-by-step through the design and installation of your own customized car speakers, with minimum tools and equipment. You get 20 complete projects covering both front and rear speakers for sedans, pickups, vans, Jeeps, and SUVs. Many of the designs appear nowhere else--and virtually all have tested in use and found to be significant improvements over conventional wisdom. Each project takes you from the circuit schematic to the construction of the enclosure to installing the system in the vehicle. This hands-on guide is loaded with hundreds of digital photos--plus design spreadsheets, Thiele-Small parameter measurement

techniques, and examples of speaker design shareware in the Appendix.

Driving radio-control cars is an enjoyable hobby and also a competitive sport, but the vast range of different types of models now available can prove confusing for those new to the scene. Radio Control Car Manual starts by providing all the information

needed to choose the right model, and goes on to present advice on how to build kits as well as driving techniques, maintenance, modifying, set-up and the various different classes of racing. Essential reading for those contemplating buying their first model and for those already involved in the scene looking to progress to the next level.
