Nelson's Perpetual Loose-leaf Encyclopaedia

The third Canadian Edition of Vogt/Nauth's Carpentry is the market-leading Carpentry text in Canada, designed for community college students enrolled in Apprenticeship and Diploma programs. Developed in line with the 2015 National Building Code of Canada, Carpentry provides students with both the theory and industry knowledge required to apprentice and go on to work in the carpentry trade. The core of the carpentry trade as practiced in Canada is covered in four comprehensive sections: Tools and Materials, Rough Carpentry, Exterior Finish, and Interior Finish. Each section features step-by-step procedures for all stages of construction, important safety precautions, tips of the trade, and a look at anticipated future trends in the construction industry. The engaging design and layout is accompanied by a focus on necessary soft skills and features that build necessary critical thinking skills (?What?s Wrong With This Picture? and ?Deconstruct This?). All measurements are given in both imperial and metric systems. MindTap helps theory come alive with interactive learning tools, videos and animations for kinesthetic and visual learners while the learning path keeps students on track. This engaging resource prepares apprentices for their future careers like nothing else on the market.

"Of all the literature I use while preparing field guides for the Food and Agriculture Organization of the United Nations, Nelson's Fishes of the World is, by far, the one I refer to most often. [This] book is a standard reference . . . I continue to use it extensively in the ichthyology courses I teach, particularly in laboratory sessions." -Kent E. Carpenter Old Dominion University "Fishes of the World is a unique and essential resource for anyone seriously interested in the diversity and evolution of fishes. The family accounts provide quick summaries of current knowledge on all groups of living fishes and many key fossil taxa. It is a required work for every student in my laboratory." -William E. Bemis Kingsbury Director of Shoals Marine Laboratory, Cornell University "Only classics are known by the single name of their author, and certainly [Nelson's book] has for four editions been such a book for all those who seek an accessible, up-to-date, readable reference on fish classification. Once again, Nelson presents a balanced view of the sometimes tumultuous, but ever-exciting, study of the phylogenetic relationships and classification of fishes. In doing so, Nelson makes an excellent case for organismal biology, highlighting the many and varied morphological characters we use to diagnose fish taxa and differentiate among the 515 families of living species." -Lynne R. Parenti Curator of Fishes and Research Scientist, National Museum of Natural History, Smithsonian Institution Fishes of the World, Fourth Edition is the updated edition of a true classic in the field. A unique presentation of a modern, cladistically based classification of all the major living and fossil fish groups, this indispensable reference helps scientists and others identify and classify specimens, make familial connections, understand the evolution of fishes, and springboard into further research. The taxonomy of fishes presented includes the anatomical characteristics, distribution, common and scientific names, and phylogenetic relationships for all 515 families of living fishes. Packed with representative species drawings and information on phylogentic relationships, this informative Fourth Edition features: * Both fossil and extant species * More than 500 illustrations * Fully vetted scientific and common names * An extensive bibliography
