Advance Papers of the Conference

This volume brings together selected papers presented during the 9th International Conference of the Association of Czech Teachers of English, titled "Teaching for Tomorrow" and hosted by the English Department of the Faculty of Science, Humanities and Education at the Technical University of Liberec, Czech Republic. The conference brought together English Language Teaching (ELT) professionals from primary, secondary and tertiary education to discuss a variety of English as a Foreign Language (EFL)-related topics, ranging from reports on language research to viewpoints and insights on classroom practice. The contributions are grouped into three sections: a) Focus on Selected Language Topics, b) Increasing Learner Autonomy and c) Innovative Teaching English as a Foreign Language (TEFL) ideas. Papers were carefully chosen in order to appeal to a broad audience. Consequently, there are articles which have a mainly theoretical bent and those which have a more practical leaning. Although the conference was hosted in the Czech Republic and the majority of participants were from this country, the book is relevant to any context where English is taught as a foreign or second language. Therefore, teachers, advanced students of English, language researchers, and, indeed, anyone engaged in the EFL profession will find this collection both educational and thought-provoking.

Homework for Grown-ups

'The editor and authors in this volume make a convincing case for focusing on advanced foreign language instruction. Importantly, they invite consideration of this focus as an opportunity to re-examine conventional definitions of the target of

instruction. In so doing, readers also learn more about the theories highlighted in this volume, and their capacity to enhance our understanding of advancedness and its development within an educational context. This book thus mediates between linguistic and language learning theories and educational practice, modelling the very best of what applied linguistics has to offer.' Diane Larsen-Freeman, Professor of Education, University of Michigan. The reality of multicultural societies and globalization has increased the demand for language abilities that far exceed those that have typically been associated with communicative competence in a second language. This book examines the acquisition of advanced levels of ability in three parts: theoretical; descriptive; and instructional. It moves beyond the traditional constraints of second language acquisition research by linking systemic functional linguistics and sociocultural theory. The contributors draw primarily on the work of Halliday, Vygotsky and Bakhtin, as well as empirical data from the language classroom, to suggest practical applications towards advanced literacy and linguistic competence. Advanced Language Learning will be of interest to academics researching systemic functional linguistics, second language acquisition and applied linguistics.

The Blue Book of Grammar and Punctuation

This groundbreaking undergraduate textbook on modern Standard English grammar is the first to be based on the revolutionary advances of the authors'

previous work, The Cambridge Grammar of the English Language (2002). The analyses defended there are outlined here more briefly, in an engagingly accessible and informal style. Errors of the older tradition of English grammar are noted and corrected, and the excesses of prescriptive usage manuals are firmly rebutted in specially highlighted notes that explain what older authorities have called 'incorrect' and show why those authorities are mistaken. This book is intended for students in colleges or universities who have little or no previous background in grammar, and presupposes no linguistics. It contains exercises, and will provide a basis for introductions to grammar and courses on the structure of English not only in linguistics departments but also in English language and literature departments and schools of education.

Introduction to the Grammar of English

Widely used as the sole grammar text for many classrooms, here is the ideal tool for teaching English grammar through rule and not exception. Unusually lively sentences comprise the plethora of model and practice material. The exercises in Words, Phrases, Clauses touch on the use of words in sentences and concentrate on the use dependent clauses and verbal phrases in sentences. There are exercises on problems related to clauses and phrases, such as the punctuation of clauses and phrases and the case of pronouns.

Clauses & Phrases

This classic book is intended for use in which the practice of composition is combined with the study of literature, it gives in brief space the principal requirements of plain English style and concentrates attention on the rules of usage and principles of composition most commonly violated.

Lord of the Flies

This well-illustrated book outlines a framework for the analysis of syntactic structure from a perspective of a systematic functional grammar. In oart, the book goes back to the grammar's "scale and category" roots, but now with the aim of presenting how a descriptive framework illustrating how the analysis of the syntactic structure can reflect the meaning structure.The contents are divided into four sections. Section one gives a brief overview of systematic grammar, including the linguistic system, context of situation, and language fractions. Developing the lexicogrammar, section two considers formal units and their classes, but the principal focus is on section three, which covers the role of units as elements of structure. Section four discusses areas of structural complexity and concludes with several refinements to the analysis format.

Topics included: Object of Prepositions; Prepositional Phrases (as adjectives/as adverbs); Faulty Reference; and Coordinating, Correlative, and Subordinate Conjunctions.

Straightforward

This textbook provides a thorough and precise account of all the major areas of English grammar. For practical reasons the author concentrates on Standard English and only selected aspects of its regional variation. The book is written for students who may have no previous knowledge of linguistics and little familiarity with 'traditional' grammar. All grammatical terms, whether traditional or more recent, are therefore carefully explained, and in the first three chapters the students is introduced to the theoretical concepts and methodological principles needed to follow the later descriptive chapters. Nevertheless, the book is more than a straightforward 'grammar of English'. Rodney Huddleston does not espouse any formalised contemporary model of syntax and morphology, but he adopts the framework of modern 'structural' linguistics, in a very broad understanding of that term. The grammatical categories postulated derive from a study of the combinational and contrastive relationships the words and other forms enter into,

and Dr Huddleston pays particular attention to the problem of choosing between alternative analyses and justifying the analysis he proposes. In this sense his book is addressed to the student of linguistics, who will find Introduction to the Grammar of English a much needed foundation for more advanced work in theoretical linguistics.

Sentences

Over the last 40 years, the study of word-order variation has become a prominent and fruitful field of research. Researchers of linguistic typology have found that every language permits a variety of word-order constructions, with subject, verb, and objects occupying varying positions relative to each other. It is frequently possible to classify one of the word orders as the basic or unmarked order and the others as marked. Moshavi's study investigates word order in the finite nonsubordinate clause in classical Biblical Hebrew. A common marked construction in this type of clause is the preposing construction, in which a subject, object, or adverbial is placed before the verb. In this work, Moshavi formally distinguishes preposing from other marked and unmarked constructions and explores the distribution of these constructions in Biblical Hebrew. She carries out a contextual analysis of a sample (the book of Genesis) of preposed clauses in order to determine the pragmatic functions that preposing may express. Moshavi's thesis is that the majority of preposed clauses can be classified as one of two syntactic-pragmatic constructions: focusing or topicalization. This meticulous yet approachable study will be useful both to students of Biblical Hebrew and to persons doing general study of syntax, especially those interested in the connection between linguistic form and pragmatic meaning.

A Commentary on the Holy Scriptures

For twenty years, unification and rewriting have played a major role in the modeling of linguistic phenomena. More recently, notions of types (as in typed

feature systems) and constraints have emerged and are now extensively used in theoretical computational linguistics and the development of applications. Recent developments in the area of logic programming, such as new compilations techniques, constraints, object-oriented programming and higher-order programming, coincide perfectly with the needs of computational linguistics. Moreover, logic programming offers a well-defined theoretical framework whose computational properties are well identified and are efficient to operate. Advanced Logic Programming for Language Processing covers the main advanced features of logic programming. Each feature is introduced step by step, and its use for natural language processing is studied in detail. A large number of programs illustrate the advantages and current limitations of each feature. This book is essential reading for advanced undergraduates and graduates in computational linguistics and cognitive science. It will also interest engineers involved in the development of natural language techniques.
