Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for

a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

Automotive Technician Training: Theory

The Adlard Coles Book of Diesel Engines, previously published as The RYA Book of Diesel Engines, is aimed at boatowners rather than experienced mechanics. In clear jargon-free English it explains how a diesel engine works, and how to look after it, and takes into account new developments in engine technology. Based on the RYA's one-day Diesel Engine course, Tim Bartlett explains how the engine uses simple processes to convert fuel to power, and then looks at the various sub-systems that allow those processes to take place. He also takes a look at tools, winterizing and provides hints, tips and fault-finding tables. 'The next best thing to taking the course itself' Motor Boats Monthly
