Professor Dr. von Igelfeld Entertainment - Book 2 The Professor Dr. von Igelfeld Entertainment series slyly skewers academia, chronicling the comic misadventures of the endearingly awkward Professor Dr. Moritz-Maria von Igelfeld, and his long-suffering colleagues at the Institute of Romantic Philology in Germany. Readers who fell in love with Precious Ramotswe, proprietor of The No. 1 Ladies' Detective Agency, now have new cause for celebration in the protagonist of these three light-footed comic novels by Alexander McCall Smith. Welcome to the insane and rarified world of Professor Dr. Moritz-Maria von Igelfeld of the Institute of Romance Philology. Von Igelfeld is engaged in a never-ending quest to win the respect he feels certain he is due—a quest which has the tendency to go hilariously astray. In *The Finer Points of Sausage Dogs*, Professor Dr. Von Igelfeld is mistaken for a veterinarian and not wanting to call attention to the faux pas, begins practicing veterinary medicine without a license. He ends up operating on a friend's dachshund to dramatic and unfortunate effect. He also transports relics for a schismatically challenged Coptic prelate, and is pursued by marriage-minded widows on board a Mediterranean cruise ship. From the Trade Paperback edition.

within and outside of the United States, the volume effectively acquaints readers with the political, economic, and social dimensions of rights issues and the documents that guarantee them. New material covers international events, such as the United Nations' Millennium Declaration (2000) and its effort to reduce the poverty and suffering of billions worldwide. The volume now emphasizes cultural rights and includes a probing lesson in cultural relativism. It turns a critical eye toward the failure in the United States to address social welfare issues and its reluctance to rectify policies favoring one group over another. Praise for the first edition: "A human rights compass—a preliminary guide for the translation of human rights for social workers. It is to be welcomed."—European Journal of Social Work "Foundation documents provide an essential tool for understanding the issues and applying the understanding to concrete social policy advocacy and action."—Canadian Association of Social Workers Bulletin "This is a text which is overdue for social work students and faculty."—Rosemary Link, coauthor of Human Behavior in a Just World: Reaching for Common Ground "Reichert makes human rights concepts come alive. Practice case examples and human rights analysis of the National Association of Social Worker's Code of Ethics are particularly valuable in orienting the reader to the domestic practice applications of the global human rights movement."—Lynne M. Healy, author of International Social Work: Professional Action in an Interdependent World

Most children learn to stop throwing temper tantrums, lying, refusing to go to bed or take a bath at an early age. But some have trouble with impulsivity and self-control, problems that, if left unchecked, can lead to more serious long-term issues that can even cross the line into crime and delinquency. This book offers a sound and safe step-by-step program for heading off conflict and getting your child to cooperate. This step-by-step approach concentrates on the most common out-of-control behaviors the author has encountered in his extensive work with parents and children. You'll learn a uniquely effective strategy for managing an out-of-control child: the behavior contract. With this technique, you can establish clearly what you expect from your child and make clear the consequences when he or she does or does not exercise behavior control. With a little effort and patience and a lot of love, this guide will help you control and find peace with even the most defiant child.

"When Stanley Morison wrote in *First Principles of Typography* that "Typography does not so much need Inspiration or Revival as Investigation," he may well have had Geoffrey Dowding in mind. Few people investigate, dissect and care about type with the passion and intensity of Dowding. He probes into every aspect & use of type and space, from word and letter arrangement to the design of type itself. He's readable, absorbing and provocative; no matter how you feel about Geoffrey Dowding's opinions, you will never approach design in quite the same way after having read *Finer Points in the Spacing and Arrangement of Type*. In his insightful new book, *Holy Shit: Managing*

Manure to Save Mankind, contrary farmer Gene Logsdon provides the inside story of manure-our greatest, yet most misunderstood, natural resource. He begins by lamenting a modern society that not only throws away both animal and human manure-worth billions of dollars in fertilizer value-but that spends a staggering amount of money to do so. This wastefulness makes even less sense as the supply of mined or chemically synthesized fertilizers dwindles and their cost skyrockets. In fact, he argues, if we do not learn how to turn our manures into fertilizer to keep food production in line with increasing population, our civilization, like so many that went before it, will inevitably decline. With his trademark humor, his years of experience writing about both farming and waste management, and his uncanny eye for the small but important details, Logsdon artfully describes how to manage farm manure, pet manure and human manure to make fertilizer and humus. He covers the field, so to speak, discussing topics like: How to select the right pitchfork for the job and use it correctly How to operate a small manure spreader How to build a barn manure pack with farm animal manure How to compost cat and dog waste How to recycle toilet water for irrigation purposes, and How to get rid ourselves of our irrational paranoia about feces and urine. Gene Logsdon does not mince words. This fresh, fascinating and entertaining look at an earthy, but absolutely crucial subject, is a small gem and is destined to become a classic of our agricultural literature.

Topology continues to be a topic of prime importance in contemporary mathematics, but until the publication of this book there were few if any introductions to topology for undergraduates. This book remedied that need by offering a carefully

thought-out, graduated approach to point set topology at the undergraduate level. To make the book as accessible as possible, the author approaches topology from a geometric and axiomatic standpoint; geometric, because most students come to the subject with a good deal of geometry behind them, enabling them to use their geometric intuition; axiomatic, because it parallels the student's experience with modern algebra, and keeps the book in harmony with current trends in mathematics. After a discussion of such preliminary topics as the algebra of sets, Euler-Venn diagrams and infinite sets, the author takes up basic definitions and theorems regarding topological spaces (Chapter 1). The second chapter deals with continuous functions (mappings) and homeomorphisms, followed by two chapters on special types of topological spaces (varieties of compactness and varieties of connectedness). Chapter 5 covers metric spaces. Since basic point set topology serves as a foundation not only for functional analysis but also for more advanced work in point set topology and algebraic topology, the author has included topics aimed at students with interests other than analysis. Moreover, Dr. Baum has supplied quite detailed proofs in the beginning to help students approaching this type of axiomatic mathematics for the first time. Similarly, in the first part of the book problems are elementary, but they become progressively more difficult toward the end of the book. References have been supplied to suggest further reading to the interested student.

Mergers and Acquisitions Deal-Makers

In the standard venture capital contract, entrepreneurs have a large fraction of equity ownership in the companies they found and are paid a sub-market salary by the investors who provide the money to develop the idea. The big rewards come only to those whose companies go public or are acquired on favorable terms, forcing entrepreneurs to bear a substantial burden of idiosyncratic risk. We study this burden in the case of high-tech companies funded by venture capital. Over the past 20 years, the typical venture-backed entrepreneur earned an average of \$4.4 million from companies that succeeded in attracting venture funding. Entrepreneurs with a coefficient of relative risk aversion of two and with less than \$0.7 million would be better off in a salaried position than in a startup, despite the prospect of an average personal payoff of \$4.4 million and the possibility of payoffs over \$1 billion. We conclude that startups attract entrepreneurs with lower risk aversion, higher initial assets, preferences for entrepreneurship over employment, and optimistic beliefs about the payoffs from their products.
