The popular media often presents a negative picture of young people and technology. From addiction to gaming, the distractions of the Internet, to the risks of social networking, the downsides of new technology in the lives of teenagers are often over-blown.

Teenagers and Technology presents a balanced picture of the part played by technology in the lives of young people. Drawing on extensive interviews conducted over several years, this book offers a timely and non-sensational exploration of teenagers' experiences and opinions about the digital technologies they use, desire and dislike. The book covers a range of topical subjects including: Social networking and online engagement in the wider social world Building online self-identity and group membership Technology in the home Developing technology skills in support of learning Drawing on technological resources in the journey towards adulthood. Grounded in what young people actually say about using new technology in their daily lives, Teenagers and Technology presents a picture in which young people have in some respects a unique relationship to technology, but one that is actually not exceptional or of a completely different order to how people in general relate to it. By providing a nuanced view on the topic, Teenagers and Technology counters the extreme accounts of 'digital youth', and exaggerated anxieties created by the mass media. It will be of interest to students and academics working in the fields of adolescent and Internet studies, along with education professionals, practitioners, teenagers

and their parents.

Agatha Christie Goes to War

"A marvel: a memoir that details her awakening as a feminist, an environmentalist, and a citizen of the world. Every single sentence is exquisite." --Maris Kreizman, *Vulture* An electric portrait of the artist as a young woman that asks how a writer finds her voice in a society that prefers women to be silent In *Recollections of My Nonexistence*, Rebecca Solnit describes her formation as a writer and as a feminist in 1980s San Francisco, in an atmosphere of gender violence on the street and throughout society and the exclusion of women from cultural arenas. She tells of being poor, hopeful, and adrift in the city that became her great teacher; of the small apartment that, when she was nineteen, became the home in which she transformed herself; of how punk rock gave form and voice to her own fury and explosive energy. Solnit recounts how she came to recognize the epidemic of violence against women around her, the street harassment that unsettled her, the trauma that changed her, and the authority figures who routinely disdained and disbelieved girls and women, including her. Looking back, she sees all these as consequences of the voicelessness that was and still is the ordinary condition of women, and how she contended with that while becoming a writer and a public voice for women's rights. She explores the forces that liberated her as a person and as a writer--books themselves, the gay men around her who offered other visions of what gender, family, and joy could be, and her

eventual arrival in the spacious landscapes and overlooked conflicts of the American West. These influences taught her how to write in the way she has ever since, and gave her a voice that has resonated with and empowered many others.

Women and the Universal Declaration of Human Rights

As Americans experiment with dismantling the nation's welfare system, clichés and slogans proliferate, ranging from charges that the poor are simply lazy to claims that existing antipoverty programs have failed completely. In this impeccably researched book, Rebecca Blank provides the definitive antidote to the scapegoating, guesswork,

and outright misinformation of today's welfare debates. Demonstrating that government aid has been far more effective than most people think, she also explains that even private support for the poor depends extensively on public funds. It takes a nation to fight a problem as pervasive and subtle as modern poverty, and this book argues that we should continue to implement a mix of private and public programs. Federal, state, and local assistance should go hand in hand with private efforts at community development and personal empowerment and change. The first part of the book investigates the changing nature of poverty in America. Poverty is harder to combat now than in the past, both because of the changing demographics of who is poor as well as the major deterioration in earnings among less-skilled workers. The second part of the book delves into policies designed to reduce poverty, presenting evidence that many though not all programs have done exactly what they set out to do. The final chapters provide an excellent review of recent policy changes and make workable suggestions for how to improve public assistance programs to assure a safety net, while still encouraging poor adults to find employment and support their families.

Saunders Math Skills for Health Professionals

The intellectual and moral imperatives that underscore public health have sustained the idea that its fundamental scope is the study of human health, illness and suffering, and that these are self-evidently

attributable to individuals and groups of people. This edited collection explores to what extent a shift towards more posthuman perspectives – where the status of the human as the obvious focus for our attention is de-stabilised – might catalyse complimentary or alternative accounts of common topics in public health. The collection argues that through this posthuman approach, standard categories such as health, illness and even the body might be re-conceived as interactions between different entities – between people, other living things, material objects and the environment – rather than as inherently human properties. By taking into greater account non-humans and relationships between humans and non-humans, this approach offers a re-casting of traditional topics in public health and opens new opportunities for examining these. In so doing, the book raises key questions about researching ‘health’; about considering the extent to which it may be productive to think about health as it interests not only human lives; and what happens to our moral and ethical commitments if we no longer put humans first. This book was originally published as a special issue of *Critical Public Health*.

The *Explicit Body in Performance* interrogates the avant-garde precedents and theoretical terrain that combined to produce feminist performance art. Among the many artists discussed are: * Carolle Schneemann * Annie Sprinkle * Karen Finley * Robbie McCauley * Ana Mendieta * Ann Magnuson * Sandra

Bernhard * Spiderwoman Rebecca Schneider tackles topics ranging across the 'post-porn modernist movement', New Right censorship, commodity fetishism, perspectival vision, and primitivism. Employing diverse critical theories from Benjamin to Lacan to postcolonial and queer theory, Schneider analyses artistic and pop cultural depictions of the explicit body in late commodity capitalism. The *Explicit Body in Performance* is complemented by extensive photographic illustrations and artistic productions of postmodern feminist practitioners. The book is a fascinating exploration of how these artists have wrestled with the representational structures of desire.

How food pantries stigmatize their clients through a discourse that emphasizes hard work, self help, and economic productivity rather than food justice and equity. The United States has one of the highest rates of hunger and food insecurity in the industrialized world, with poor households, single parents, and communities of color disproportionately affected.

Food pantries—run by charitable and faith-based organizations—rather than legal entitlements have become a cornerstone of the government's efforts to end hunger. In *Feeding the Other*, Rebecca de Souza argues that food pantries stigmatize their clients through a discourse that emphasizes hard work, self help, and economic productivity rather than food justice and equity. De Souza describes this “framing, blaming, and shaming” as “neoliberal stigma” that recasts the structural issue of hunger as a problem for the individual hungry person. De Souza shows how neoliberal stigma plays out in practice through a comparative case analysis of two food pantries in Duluth, Minnesota. Doing so, she documents the seldom-acknowledged voices, experiences, and realities of people living with hunger. She describes the failure of public institutions to protect citizens from poverty and hunger; the white privilege of pantry volunteers caught between neoliberal narratives and social justice concerns; the evangelical conviction that food assistance should be “a hand up, not a handout”; the culture of suspicion in food pantry spaces; and the constraints on food choice. It is only by rejecting the neoliberal narrative and giving voice to the hungry rather than the privileged, de Souza argues, that food pantries can become agents of food justice.

Coaching with Research in Mind

Developed in response to the theoretically driven mainstream sociology, institutional ethnography starts from people's everyday experiences, and works from there to discover how the social is organized. Starting from experience is a central step in challenging taken-for-granted assumptions and relations of power, whilst responding critically to the neoliberal cost-benefit ideology that has come to permeate welfare institutions and the research sector. This book explicates the Nordic response to institutional ethnography, showing how it has been adapted and interpreted within the theoretical and methodological landscape of social scientific research in the region, as well as the institutional particularities of the Nordic welfare state. Addressing the main

topics of concern in the Nordic context, together with the way in which research is undertaken, the authors show how institutional ethnography is combined with different theories and methodologies in order to address particular problematics, as well as examining its standing in relation to contemporary research policy and university reforms. With both theoretical and empirical chapters, this book will appeal to scholars and students of sociology, professional studies and anthropology with interests in research methods and the Nordic region.

Music as Propaganda in the German Reformation

This volume will provide students with an introduction to the poetry and life of Elizabeth Barrett Browning, one of the most popular poets of her day in Britain and America and who has become one of the great icons of Victorianism for the modern age. The authors present a biographical survey, study of her poetry, its critical reception and an assessment of her influence on later poets. This book also examines the complex 'myths' which are associated with Elizabeth Barrett Browning and offers re-readings of her life and work, particularly in dispelling the myth of the ailing invalid poet-recluse and instead showing her to be one of the great intellectuals of her day, immersed in European history and politics from a very early age. The book situates Browning within broader historical, political and cultural contexts than have yet been examined enabling a better understanding of her poetry and paints the portrait of a fine and innovative poet, an

Who were the non-Western women delegates who took part in the drafting of the United Nations Charter and the Universal Declaration of Human Rights (UDHR) from 1945-1948? Which member states did these women represent, and in what ways did they push for a more inclusive language than "the rights of Man" in the texts? This book provides a gendered historical narrative of human rights from the San Francisco Conference in 1945 to the final vote of the UDHR in the United Nations General Assembly in December 1948. It highlights the contributions by

Latin American feminist delegates, and the prominent non-Western female representatives from new member states of the UN.

This innovative volume introduces Twinley's concept of 'The Dark Side of Occupation'. Focused on less explored and under-addressed occupations, it is an idea which challenges traditional assumptions around the positive, beneficial, health-promoting relationship between occupation and health. Emphasising that people's individual experiences of occupations are not always addressed and may not always be legal, socially acceptable, or conducive to good health, the book investigates how these experiences can be explored theoretically, in practice and research, and in curriculum content for those learning about occupation. Beginning with a discussion of some assumptions and misunderstandings that have been made about the concept, the substantive chapters present and analyse tangible examples of the concept's applicability. This ground-breaking and practice-changing text provides ideas for future research and highlights contemporary, internationally relevant issues and concerns, such as the coronavirus pandemic. This book is an essential purchase for students in occupational therapy and science, and valuable supplementary reading for practitioners. It is also relevant to a wide interdisciplinary audience with an interest in human occupation, encompassing anthropologists, councillors, criminologists, nurses, and human geographers.

Teachers are the most important determinant of the quality of schools. We should be doing everything we can to help them get better. In recent years, however, a cocktail of box-ticking demands, ceaseless curriculum reform, disruptive reorganisations and an

Access Free Access Health Edition Rebecca Donatelle Book

audit culture that requires teachers to document their every move, have left the profession deskilled and demoralised. Instead of rolling out the red carpet for teachers, we have been pulling it from under their feet. The result is predictable: there is now a cavernous gap between the quantity and quality of teachers we need, and the reality in our schools. In this book, Rebecca Allen and Sam Sims draw on the latest research from economics, psychology and education to explain where the gap came from and how we can close it again. Including interviews with current and former teachers, as well as end-of-chapter practical guidance for schools, *The Teacher Gap* sets out how we can better recruit, train and retain the next generation of teachers. At the heart of the book is a simple message: we need to give teachers a career worth having.

agriculture, Environmental Justice and Farm Labor provides key insights about laborers in agriculture in the United States. It addresses three main topics: (1) justice-related issues facing farmers and laborers on farms; (2) how history and policy have impacted them; and (3) the opportunities and leverage points for change in improving justice outcomes. It explores who labors in US agriculture and the justice-related issues facing these workers, including occupational injury and illness, lack of access to healthcare, substandard housing, hunger, low wages, issues pertaining to immigration, and the inability to organize. In addition, it assesses the impacts of labor safety, immigration and international policy, and in particular the effects of organic and fair trade certification. Two detailed case studies, one based on conventional agriculture in Florida and the other on organic agriculture in the Northeast, highlight the interrelated but unique challenges facing those who labor in the different sectors of this complex agricultural system. Finally, it touches on justice claims and the role of grassroots activism in improving justice outcomes by highlighting organizations operating at multiple scales to contribute to the livelihood of farmers and laborers in the different areas of agriculture.

Create a healthier and happier life by treating yourself with compassion rather than shame. Imagine a graph with two lines. One indicates happiness, the other tracks how you feel about your body. If you're like millions of people, the lines do not intersect. But what if they did? This practical, inspirational, and visually lively book shows you the way to a sense of well-being attained by understanding how to love, connect, and care for yourself—and that includes your mind as well as your body. Body Kindness is based on four principles. WHAT YOU DO: the choices you make about food, exercise, sleep, and more HOW YOU FEEL: befriending your emotions and standing up to the unhelpful voice in your head WHO YOU ARE: goal-setting based on your personal values WHERE YOU BELONG: body-loving support from people and communities that help you create a meaningful life With mind and body exercises to keep your energy spiraling up and prompts to help you identify what YOU really want and care about, Body Kindness helps you let go of things you can't control and embrace the things you can by finding the workable, daily steps that fit you best. It's the anti-diet book that leads to a more joyful and meaningful life.

'Beautiful, evocative, authoritative.' Professor Brian Cox 'Important reading not just for anyone interested in these ancient cousins of ours, but also for anyone interested in humanity.' Yuval Noah Harari *Kindred* is the definitive guide to the Neanderthals. Since their discovery more than 160 years ago, Neanderthals have metamorphosed from the losers of the human family tree to A-list hominins. Rebecca Wragg Sykes uses her experience at the cutting-edge of Palaeolithic research to share our new understanding of Neanderthals, shoving aside clichés of rag-clad brutes in an icy wasteland. She reveals them to be curious, clever connoisseurs of their world, technologically inventive and ecologically adaptable. Above all, they were successful survivors for more than 300,000 years, during times of massive climatic upheaval. Much of what defines us was also in Neanderthals, and their DNA is still inside us. Planning, co-operation, altruism, craftsmanship, aesthetic sense, imagination, perhaps even a desire for transcendence beyond mortality. *Kindred* does for Neanderthals what *Sapiens* did for us, revealing a deeper, more nuanced story where humanity itself is our ancient, shared inheritance.

Illuminating The Dark Side of Occupation

Over the first four decades of the Reformation, hundreds of songs written in popular styles and set to well-known tunes appeared across the German territories. These polemical songs included satires on the pope or on Martin Luther, ballads retelling historical events, translations of psalms and musical sermons. They ranged from ditties of one strophe to didactic Lieder of fifty or more. Luther wrote many such songs and this book contends that these songs, and the propagandist ballads they inspired, had a greater effect on the German people than Luther's writings or his sermons. Music was a major force of propaganda in the German Reformation. Rebecca Wagner Oettinger examines a wide selection of songs and the role they played in disseminating Luther's teachings to a largely non-literate population, while simultaneously spreading subversive criticism of Catholicism. These songs formed an intersection for several forces: the comfortable familiarity of popular music, historical theories on the power of music, the educational beliefs of sixteenth-century theologians and the need for sense of community and identity during troubled times. As Oettinger demonstrates,

this music, while in itself simple, provides us with a new understanding of what most people in sixteenth-century Germany knew of the Reformation, how they acquired their knowledge and the ways in which they expressed their views about it. With full details of nearly 200 Lieder from this period provided in the second half of the book, *Music as Propaganda in the German Reformation* is both a valuable investigation of music as a political and religious agent and a useful resource for future research.

The Profession and Practice of Horticultural Therapy

How can coaches maximise the effectiveness of their practice? What can research tell us about how and why coaching 'works'? How can we use the evidence base to enable others to reach their full potential? Coaching with Research in Mind brings together cutting-edge research in coaching and psychology, accessibly summarises the findings, and provides a clear and specific breakdown of what research tells us coaches and leaders should be doing and why. Rebecca J. Jones provides practitioners with the information and guidance they need to apply research

in their practice, explaining how coaches can understand coachee characteristics, how they impact the coaching process and how coaches should adapt their practice to accommodate them. The book explains how to identify which principles of the coaching process influence effectiveness and tailor practice to maximise their impact. Jones also explores the impact of environmental factors and assesses how their influence can be limited. *Coaching with Research in Mind* will be essential reading for both new and experienced coaches looking to enhance the effectiveness and impact of their coaching, and for managers, leaders and L&D procurers who utilise coaching as a leadership style.

Agatha Christie has never been substantially considered as a war writer, even though war is a constant presence in her writing. This interdisciplinary collection of essays considers the effects of these conflicts on the social and psychological textures of Christie's detective fiction and other writings, demonstrating not only Christie's textual navigation of her contemporary surroundings and politics, but also the value of her voice as a popular fiction writer reflecting popular concerns. *Agatha Christie Goes to War* introduces the 'Queen of Crime' as an essential voice in the discussion of war, warfare, and twentieth century literature.

Contemporary social and cultural life is increasingly organised around a logic of self-transformation, where changing the body is seen as key. *Transforming Images* examines how the future functions within this transformative logic to indicate the potential of a materially better time. The book explores the crucial role that images have in organising an imperative for transformation and in making possible, or not, the materialisation of a better future. Coleman asks the questions: which futures are appealing and to whom? How do images tap into and reproduce wider social and cultural processes of inequality? Drawing on the recent 'turns' to affect and emotion and to understanding life in terms of vitality, intensity and 'liveness' in social and cultural theory, the book develops a framework for understanding images as felt and lived out. Analysing different screens across popular culture – the screens of shopping, makeover television programmes, online dieting plans and government health campaigns – it traces how images of self-transformation bring the future into the present and affectively 'draw in' some bodies more than others. *Transforming Images* will be of interest to students and scholars working in sociology, media studies, cultural studies and gender studies.
