GRIHA Manuals

GRIHA the national rating system of India is an evaluation tool for measuring and rating a building's environmental performance. This set of 5 GRIHA manuals have been developed as a guide for building professionals (architects, services engineers, landscape designers, project managers, contractors, etc.) who are involved in the design and construction of green buildings, to provide them a comprehensive understanding of the GRIHA rating system. The information provided in these manuals will serve as a complete guide for individuals who are interested in knowing about this rating system, its underlying criteria, rating process, strategies that should be adopted for complying with all the criteria and the documentation preparation and evaluation procedure.

Africa's Growing Role in World Politics

The changes following more than two decades of economic reforms and globalization of the Indian economy - at state, corporate sector, and consumer level - raise interesting questions on the ways in which the stakeholders will continue to engage on the world stage, politically, socially and economically. One key feature of global trade over this period has been the growing importance of not only product standards but, importantly, labor, environmental, food safety and social standards. Being essentially a non-tariff barrier, standards have often become critical to market access and essential to sustained competitiveness. This has a clear impact on the manner in which both global and Indian business is conducted now and in the future. It also underlines the need for a new area of enquiry that addresses the following questions: How are the Indian public and private actors - the state, domestic firms, local consumers and society - influencing and being influenced by such standards? Do standards really matter in an overwhelmingly informal production sphere, with consumers deeply segmented on the basis of a highly skewed distribution of income and with the rural population

becoming further marginalized? We have limited knowledge about the challenges faced and strategies pursued by these key domestic actors, both public and private. How have they been able to drive these processes and what are their implications for larger concerns with inequalities and the conditions of the poor? How does the omnipresent informality influence compliance, encourage multiple standards and affect the chances of addressing institutional dysfunctionality? What role does regulation play? These are some of the issues dealt with in the book, which has chapters focusing on aspects of specific sectors such as microfinance, pharmaceuticals, automobiles, tea trading, the role of the state and changing consumer influence. We have limited knowledge about the challenges faced and strategies pursued by these key domestic actors, both public and private. How have they been able to drive these processes and what are the consequences of these changes for the Indian economy, other emergent economies and for the rest of the developing world? In particular, what are their implications for the wider Indian society, especially on concerns with informality, inequalities and the conditions of the poor? How does informality in its omnipresent form influence compliance, encourage multiple standards and chances of addressing institutional dysfunctionality? What role does regulation play? These are some of the issues dealt within the book wherein chapters focus on aspects of specific sectors, trading, role of the state and changing influence of the consumer.

Emphasizing basic mass and energy balance principles, Chemical and Energy Process Engineering prepares the next generation of process engineers through an exemplary survey of energy process engineering, basic thermodynamics, and the analysis of energy efficiency. By emphasizing the laws of thermodynamics and the law of mass/matter conservation, the author builds a strong foundation for performing industrial process engineering calculations. The book's systematic treatment applies these core principles on a macro-level scale, allowing for more manageable calculations. The development of new processes is demanding and exciting. The instruction within these pages enables engineers to understand and analyze existing processes and primes them for participation in the development of new ones.

Discover the fascinating stories behind the words and phrases we use every day. English is now the world's most popular second language, understood by over 700 million people across the globe. Its use is amazingly broad: not only is it the language of Chaucer and Shakespeare, but also of hip-hop, international business and the internet (over 80% of home pages are in English). So where exactly do English words come from? They come from everywhere. English is a vast, rambling conglomeration of words and phrases from a huge variety of times and places, and every word has its own intriguing history. *Balderdash & Piffle* is a guidebook an entertaining look at what falls out of the chaotic family tree of English words when you uproot it and give it a damn good shake. Shaking the tree is writer, humourist and word-sleuth Alex Games. If you've ever wondered who first used cuppa in print, what language gave us shampoo, when we started saying window, where minging comes from, what Shakespeare had to say about geeks and why berk is really, really rude, you'll find it all (and much more) inside. You'll also have the chance to do your own word-sleuthing, through the BBC Wordhunt appeal. Who knows if you have written evidence of a bouncy castle from before 1986, you could even re-write history

For over three decades, the capability approach proposed and developed by Amartya Sen and Martha Nussbaum has had a distinct impact on development theories and approaches because it goes beyond an economic conception of development and engages with the normative aspects of development. This book explores the new frontiers of the capability approach and its links to human development in three main areas. First, it delves into the philosophical foundations of the approach, re-examining its links to concepts of common good, collective agency and epistemic diversity. Secondly, it addresses its 'operational frontier', aiming to give inclusive explanations of some of the most advanced methods available for capability researchers. Thirdly, it offers a wide range of the applications of this approach, as carried out by a mix of renowned capability scholars and researchers from different disciplines. This broad interdisciplinary range includes the areas of human and sustainable development, inequalities,

labour markets, education, special needs, cities, urban planning, housing, social capital and happiness studies, among others.

Humans generate millions of tons of waste every day. This waste is rich in water, nutrients, energy and organic compounds. Yet waste is not being managed in a way that permits us to derive value from its reuse, whilst millions of farmers struggle with depleted soils and lack of water. This book shows how Resource Recovery and Reuse (RRR) could create livelihoods, enhance food security, support green economies, reduce waste and contribute to cost recovery in the sanitation chain. While many RRR projects fully depend on subsidies and hardly survive their pilot phase, hopeful signs of viable approaches to RRR are emerging around the globe including low- and middle-income countries. These enterprises or projects are tapping into entrepreneurial initiatives and public-private partnerships, leveraging private capital to help realize commercial or social value, shifting the focus from treatment for waste disposal to treatment of waste as a valuable resource for safe reuse. The book provides a compendium of business options for energy, nutrients and water recovery via 24 innovative business models based on an in-depth analysis of over 60 empirical cases, of which 47 from around the world are described and evaluated in a systematic way. The focus is on organic municipal, agro-industrial and food waste, including fecal sludge, supporting a diverse range of business models with potential for large-scale out-and-up-scaling.

Postharvest Quality Assurance of Fruits

The report begins by reviewing the evidence to date focussing on the magnitude and geographical distribution of food losses. In the next sections the role of energy in post-harvest losses is discussed. Thereafter, the main entry points within the food value chain where lack of access to energy is the dominant factor influencing food losses is discussed. This report outlines low cost and off-grid post-harvest cooling and processing technologies that can be made available in developing countries. These household to community scale evaporative cooling systems, solar assisted cooling systems and as well as solar drying systems that can help increase shelf life. Additionally, through case studies, focus is laid on assessing the technical and economic feasibility of cooling and processing technologies. Finally, recommendations are made that could be incorporated to further develop food loss strategies that can classify food value chains based on their energy demand. This will enable policy makers to quickly understand the main technologies for food preservation and processing that can be introduced based on the available energy sources in a given region.

The 650th anniversary of the foundation of Wingfield College was the occasion for a special two-day symposium marking the culmination of a three-year UEA-funded research project into the college and castle. The building projects of the late medieval aristocracy focused on their homes and the monasteries, churches or chantry foundations under their patronage where their family were buried and

commemorated. This commemoration allowed a visual celebration of their achievements, status and lineage, the scale and prestige of which reflected on the fortunes of the family as a whole. Wingfield is explored in the context of both the actual building of the castle, chantry chapel and the college, and that of the symbolic function of these as a demonstration of aristocratic status. The contributions to this book examine many topics which have hitherto been neglected, such as the archaeology of the castle, which had never been excavated, the complex history of the college's architecture, and the detailed study of the monuments in the church. The latest techniques are used to reconstruct the college and castle, with a DVD to demonstrate these. And the context of the family and its fortunes are explored in chapters on the place of the de la Poles in fifteenth century history, as soldiers, administrators and potential claimants to the throne.

How to Fix Everything For Dummies

So here he was at last, where he had long feared to be. Harry Chapman is not well, and he doesn't like hospitals. Superficially all is as it normally is in such places, with nurses to chide him and a priest to console. But there are more than usual quotient of voices - is it because of Dr Pereira's wonder drug that he can hear the voice of his mother, acerbic and disappointed in him as ever? Perhaps her presence would be understandable enough, but what is Pip from Great Expectations doing here? More and more voices add their differing notes and stories to the chorus, squabbling, cajoling, commenting. Friends from childhood, lovers, characters from novels and poetry. His father, fighting in the First World War. Babar and Céleste, who dances with Fred Astaire. Jane Austen's Emma. His aunt Rose, 'a stranger to moodiness'. Christopher Smart's cat Geoffrey. A man who wants to sell him T. S. Eliot's teeth. Virginia Woolf, the scourge of servants. And, of course, an old friend who turns up at his bedside principally to rehearse the litany of his own ailments. Slowly, endearingly, the life of Harry Chapman coalesces before our eyes, through voices real and unreal. Written with a gentle, effortless generosity, full of delicate observation, Chapman's Odyssey is the work of a master; a superbly rendered act of storytelling and ventriloquism that is waspish, witty, deeply moving and wise by turns and which constantly explores 'the unsolvable enigma of love'.

Relentlessly Relevant

Today need for breakthrough often arises because of business globalization. This book describes principles, skills, and patterns for transformational leadership. The book also includes examples of companies that are struggling with and dealing with the effects of globalization. The book is for English-language readers not only in North America and western Europe but in all countries where there is rapid business change and development, as in Eastern Europe and Asia. We have included case studies from countries in Asia, Europe, and North America. Our target readers are people in companies that are trying to move into new business areas for whatever reason or that must compete on a large geographic scale -- nationally or internationally. Most specifically, we are writing for official leaders of companies as well as for change leaders within companies or other organizations who are trying for change and/or have the freedom to change. The methods we describe apply to all types of activities -- product or service, nonprofit or for-profit,

charitable, religious, manufacturing, health care, and so forth.

The Middle Class Or You Only Live Twice

"The rules of consumer engagement have changed. Your customers no longer care about legacy - what matters to them is how you are innovating into their world today. The classic 'solve a problem' approach that industry giants have always employed is no longer relevant. Consumers want switched-on, creative responses to their needs and desires. In *Relentlessly Relevant*, professional speaker and business guru Douglas Kruger explores the field of innovation, reducing its subject matter to the simple starting points you need to become an industry trendsetter. It pinpoints the levers within your own business crying out for innovation, as well as the bits you should leave alone at all costs, and it teaches you to change your traditional way of thinking, altering how you relate to your customers' immediate reality. Using examples from local and international brands, this book shows you don't have to be a tech giant to innovate, but you do need to know how to think in the right patterns. This is a business imperative. Innovators of today will own their industries tomorrow by constantly asking, 'How can we become relentlessly relevant?'"-- Back cover.

Globalization and Standards

Sustainable Operations and Supply Chain Management addresses the most relevant topics of operations and supply chain management from the perspective of sustainability. The main focus is to provide a step by step guide for managerial decisions made along the product life-cycle, following a path made up of the following steps: product design, sourcing, manufacturing, packaging and physical distribution, reverses logistics and recovery.

The Global Innovation Index ranks the innovation performance of 125 countries and economies around the world, based on 80 indicators. This edition explores the impact of innovation-oriented policies on economic growth and development. High-income and developing countries alike are seeking innovation-driven growth through different strategies. Some countries are successfully improving their innovation capacity, while others still struggle.

Godrej: The builder also grows

This is a basic text in International Marketing, a major knowledge area for students of management studies. This book attempts to make learning of the nuances of the subject easy and enjoyable for students. International trade, economic free trade zones, embargoes on exports, and tariff and non-tariff barriers that the companies face overseas form a major part of the book. In addition, the role of international organizations under the guidance of the United Nations has been given its due importance.

Wingfield College and Its Patrons

This volume includes a selection of papers dedicated to the problems of the contemporary international relations and foreign policies of the African states. Most of these papers were presented at the panels, held within the framework of the 13th International Conference of Africanists "Society and Politics in Africa: Traditional, Transitional and New" (Moscow, Russia, May 27-30, 2014). The book contains many articles devoted to the Western countries' policies in Africa. On the background of the ongoing competition between Washington and Beijing, the US Administration has recently increased the amount of attention it pays to the continent. The European Union is also actively developing its strategic partnership with Africa. The authors thoroughly analyse the ongoing cooperation between African states and China, a great "emerging donor" and investor. They particularly address the question about possible implications of China's African policy for the countries of the continent. Major attention is given to Sudan and South Sudan. One of the urgent problems addressed is the situation with African IDPs and refugees, their life conditions in camps and the measures for their transition to normal life.

How Access to Energy Can Influence Food Losses

This book explores the new product development process of firms developing frugal innovation for the base-of-the-pyramid (BOP) markets in developing countries. Frugal innovations are products characterised by an affordable price-point, durability, usability and core functionalities that are highly adapted to BOP consumers' needs. Frugal products have the potential to drive the development progress and living standards of low-income consumers. With an innovation framework developed from worldwide frugal case studies, this book provides detailed insights through two in-depth start-up firms in Indonesia that have successfully launched frugal products for the low-income market. These two start-ups have addressed two major development challenges for not just Indonesia, but also the global BOP market – traditional methods of cooking and access to clean drinking water. A detailed roadmap is developed from insights into the processes and management decisions of these two start-ups and combined with previous studies on frugal products. Providing a detailed roadmap across the different phases and stages of the new product development process when developing frugal products, this book will be insightful to not only innovators but also investors and government agencies supporting their activities.

Building Energy Efficiency

India's Urban Awakening

Asia has an enormous, largely untapped, opportunity to save money and cut growth in greenhouse gas emissions by taking measures to increase energy efficiency in buildings. Energy efficiency is one of the quickest, cheapest, cleanest ways to address energy and environmental challenges. In China, gaining a megawatt of electricity by building more generating capacity costs four to six times as much as saving a megawatt through greater efficiency--and that ignores the environmental costs of using fossil fuels. Yet China currently is building the equivalent of two 500-megawatt power plants every week. More than half of the world's new construction is taking place in China and India alone. Buildings account for around 30 percent of the world's total energy consumption and a similar percentage of the world's greenhouse gas emissions. The way buildings are designed and constructed today not only will have an impact on their operating costs, but will affect the world's energy consumption patterns and environmental conditions for many years to come.

New Frontiers of the Capability Approach

On 8 January 1979, in the late evening, Naval, the third son of Pirojsha Godrej, was brutally stabbed at his residence, along with his daughter-in-law and mother-in-law. This dastardly attack, incited by a powerful trade union leader in Mumbai, outraged people in trade circles and the public at large. The victim was one of those rare industrialists who had forged a legendary bond with his workers; he trusted their essential goodness, believing he could have no enemies---a fatal flaw according to the author---, in as much as they thought Naval could never do them wrong. In *Final Victory: The Life---and Death---of Naval Pirojsha Godrej*, B.K. Karanjia draws upon his reminiscences of Naval from their five-decade-long friendship, interviews with Naval's family, friends, associates and workers at Godrej, and his private papers, to paint a warm and compelling portrait of a man with an exceptional strength of mind and character. We get a glimpse of Naval, a mechanical wizard, who was chosen by his father to join the business straight out of high school. Learning skills from the shop floor upwards, led Naval to support a hands-on approach in tackling problems, 'never expecting others to do what he would not undertake himself.' His affinity for machines led Naval to develop the Godrej Tool Room, and to initiate the hugely successful typewriter and refrigeration lines of business that, with safes and Storwels, made Godrej a household name. He was deeply involved in the construction of the Godrej industrial garden township at Vikhroli, considered among the most environment-friendly. In keeping with the Godrej family's deep commitment to worker welfare and human development,

Naval played an important role in setting up the Naoroji Godrej Plant Research Center, the Foundation for Medical Research, and the Mandwa Project of the Foundation for Research in Community Health. Rich in detail, the book also brings out Naval's humility and simplicity, his tremendous drive and energy, his quick anger at perceived injustice, his mischievous wit, and love of sports, especially sailing. Full of anecdotes, this lively account of an extraordinary life, affirms Naval's place as one of the builders of the House of Godrej.

Optimizing Stormwater Treatment Practices: A Handbook of Assessment and Maintenance provides the information necessary for developing and operating an effective maintenance program for stormwater treatment. The book offers instructions on how to measure the level of performance of stormwater treatment practices directly and bases proposed maintenance schedules on actual performance and historical maintenance efforts and costs. The inspection methods, which are proven in the field and have been implemented successfully, are necessary as regulatory agencies are demanding evaluations of the performance of stormwater treatment practices. The authors have developed a three-tiered

approach that offers readers a standard protocol for how to determine the effectiveness of stormwater treatment practices currently in place.

This book presents a comprehensive study of the handling of fresh fruits in the developing world from harvesting to the shelf. With annual losses ranging from 30-40% due to lack of knowledge on proper handling practices and value addition, this book's information on postharvest handling and quality testing is crucial for reducing these losses and improving the quality and safety of fresh fruits in these areas. With its added focus on marketing and organized retail aspects, Postharvest Quality Assurance of Fruits: Practical Approaches for Developing Countries covers the entire range of fruit handling, from transportation and packaging to quality assessment and commercial preparation. In presenting a fully comprehensive outline of the factors affecting postharvest quality and marketability of fruits, this work lays the foundation for understanding the proper storage, transportation and packaging methods to prevent losses and increase quality. With its study of prevailing marketing systems, supply chains and retail methods, the book presents the complete picture for the postharvest handling of fruits in the developing world.

Mergent Industrial Manual

Document from the year 2016 in the subject Sociology - Social System, Social Structure, Class, Social Stratification, University of Poznan (Institute of Sociology), language: English, abstract: The book tests the double hypothesis of the death of the middle class. Using U.S. and other developed and developing countries' materials, it seeks to answer whether the popular thesis on its demise is true, and second, it shows it is true in a conceptual sense, viz., the term in question is a misnomer, referring to a stratum rather than a class. In the course of those investigations other key questions are examined, such as an all-important issue of socio-economic inequality: both in national and world context. The study is underpinned by an original conceptual framework encompassing social class and estate theories and ownership theory. This makes it possible to criticise many other approaches to the problems analysed. For instance, a critique of a well-known book by the French economist Th. Picketty has been undertaken, showing its numerous flaws. In addition, the analysis of the middle class concept demonstrates its defects manifest in its various definitions and usages.
