Insects

Bugs Are Insects

The Wonders of the Insect World

In this sixth DATA Set adventure the kids get shrunk down and go on a buggy adventure across Bunsen's backyard. The town of Newtonburg has been invaded by all sorts of creepy-crawlies from mosquitoes to bees to ants and more! What's worse is that they are all mysteriously swarming toward Dr. Bunsen's house at the same time that Laura mistakenly gets shrunken down to the size of an insect. Can the DATA Set find their missing friend in time, or will Laura be forever lost in Dr. Bunsen's backyard...which is full of grasshoppers, spiders, and things that go buzz in the night! With easy-to-read language and illustrations on almost every page,

Invasion of the Insects

The Virginia School Journal

With its stylish new package, updated information on the health and environmental benefits of insect eating, and breed-your-own instructions, this new edition of The Eat-a-Bug Cookbook is the go-to resource for anyone interested in becoming an entomological epicure. Before Andrew Zimmern and Anthony Bourdain began seeking out exotic and outright bizarre foods, The Eat-a-Bug Cookbook established insect cuisine as the new food frontier and has sold consistently over the last decade. Today, insect eating is more than just a fringe movement and this revised

Ladybugs

Outlines of Course of Instruction in Agricultural Nature Study for the Rural Schools of California

What makes an insect an insect? What makes a bug a bug? Read and find out! With intricate and vividly colored collages from Caldecott Medal winner Steve Jenkins and engaging text from Anne Rockwell, *Bugs Are Insects* introduces the youngest readers to the fascinating world of the creepy crawly. Now rebranded with a new cover look, this NSTA/CBC Outstanding Science Trade Book includes activities such as conducting an insect survey, drawing a picture of your favorite insects, and planting a butterfly garden. Both text and artwork were vetted for accuracy by Dr. Ed Spevak, Curator of Invertebrates and Director of the Saint Louis Zoo WildCare Institute Center for Native Pollinator Conservation. This is a Level 1

Chirp! Chirp! Chirp! That's the sound crickets make. You've probably heard them chirp on a summer evening. But did you know that they make their chirping sounds by rubbing their wings together, and that only male crickets can chirp? Inside this book you'll learn about crickets, and even how to tell the temperature by counting a cricket's chirps. Melvin Berger and Megan Lloyd have created a wonderful introduction to a fascinating insect: the cricket. Chirrrp, chirrrp, chirrrp that's the sound of crickets on a summer evening. A male cricket makes this sound by rubbing his legs against a bumpy vein on his wing. Find out more about crickets, including how they hear with their knees, in this stunningly illustrated introduction to the cricket.

by fireflies on calling heterospecifics (Lloyd 1984) or the location of calling crickets by tachinid flies (Cade 1975). Sexual selection theory would predict that if there were any risks involved in mating then the sex offering the highest investment should take fewer of them. Given these factors and an inherent risk of detection by predators of calling individuals, males are more likely to signal than females (Thornhill 1979). Further, if the quantity (length and/or loudness) of the acoustic signal were correlated with the risks of exposure, we may predict that insects calling from exposed perches, or in areas of high predation, would use calls with a low duty cycle (the calls are short and widely spaced in time). Belwood provides an extensive account of defensive strategies used by tettigoniids in the tropical rainforests of Central and South America. Her discussion includes both cryptic strategies in avoiding day time predators and also signalling strategies avoiding those operating at night. As the signal shortens so selection is transferred from the caller to the searching female, and male location may become more risky than calling itself. At this juncture it may be advantageous for the female to call in reply to the male. This role reversal in signalling often results in duetting where the male calls and the female replies within a very narrow time window. The male now searches for the female, taking on both risks of calling and moving.

Grasshoppers

The Tettigoniidae

A basic overview of the life cycle of a grasshopper.

Using Live Insects in Elementary Classrooms for Early Lessons in Life

This unique resource helps educators spark young children's interest in learning the alphabet and develop beginning reading skills right from the beginning to the close of school. Included are over 500 ready-to-use individual and classroom activities designed to be used sequentially, from one month to the next, to build skills, relate reading to other curriculum areas, and foster children's enthusiasm for books and learning to read. All activities are organized into nine monthly sections, September through May/June, and include over 100 activity sheets. Each month includes a list of 10 picture books for daily reading, phonics and other basic skills instructions, "ABC Marching Band Letters" for learning letter-sound connections, reading links to holidays and special events, reading links to writing, math, social studies, science & health, author-of-the-month studies and activities,
