Comparative Emergency Management

Communications are key to the success of disaster mitigation, preparedness, response, and recovery. Accurate information disseminated to the general public, to elected officials and community leaders, as well as to the media, reduces risk, saves lives and property, and speeds recovery. Disaster Communications in a Changing Media World, Second Edition, provides valuable information for navigating these priorities in the age of evolving media. The emergence of new media like the Internet, email, blogs, text messaging, cell phone photos, and the increasing influence of first informers are redefining the roles of government and media. The tools and rules of communications are evolving, and disaster communications must also evolve to accommodate these changes and exploit the opportunities they provide. Disaster Communications in a Changing Media World, Second Edition, illuminates the path to effective disaster communication, including the need for transparency, increased accessibility, trustworthiness and reliability, and partnerships with the media. Includes case studies from recent disasters including Hurricane Sandy, the 2011 tsunami in Japan, and the Boston Marathon bombings Demonstrates how to use blogs, text messages, and cell phone cameras, as well as government channels and traditional media, to communicate during a crisis Examines current social media programs conducted by FEMA, the American Red Cross, state and local emergency managers, and the private sector Updated information in each chapter, especially on how social media has emerged as a force in disaster communications

Catastrophe and Social Change

Bookshelves abound with theoretical analyses, how-to guides, and personal success stories by famous corporate leaders, public officials, even athletic coaches, expounding on how to lead from the top. But what about those in the middle who are increasingly tasked with trying to reshape, reorient, or recreate the capabilities of an organization? *Leading Change from the Middle* takes you on the journeys traveled by Kurt Mayer, an information technology executive in the Department of Defense trying to build a new IT system in record time with limited resources, and Stephen Wang, a mid-level leader in city government trying to build a capability for supporting commercial agriculture. Kurt and Stephen have to navigate complex organizational and stakeholder landscapes in which they often have few decision rights and few resources—a common scenario for mid-level leaders. One succeeds; one does not. While following Kurt and Stephen, the book introduces a new approach for increasing the likelihood of successfully leading change. This new approach breaks down into three core strategies: First, identify all relevant stakeholders and partition them into four categories: superordinates, subordinates, customers, and complementors/blockers (those who control needed resources but over whom the leaders have no authority). Second, for each stakeholder category, identify Communications, Strategies, and Tactics (referred to as CoSTS). Third, don't stimulate negative emotions that make people DEAF—Disrespect, Envy, Anger, and Fear—to efforts to produce change. As the book follows the journeys of Kurt and Stephen, it walks through the details of each strategy. In presenting this material in a concise, accessible, and applicable format that translates theory to practice, Nickerson provides an important service for leaders trying to build extraordinary capabilities for their organizations—from the middle.

Molly, by Golly!

A host of natural and man-made disasters have plagued the world in the twenty-first century, many with significant global impact. The Deepwater Horizon Oil Spill, the Indian Ocean tsunami, and Hurricane Katrina all affected broad regions with devastating results. The need for better emergency management policies, procedures, and cooperation among nations is evident. Bringing together contributions from a cadre of international experts, *Comparative Emergency Management: Examining Global and Regional Responses to Disasters* demonstrates ways to recognize and reduce regional infrastructure vulnerability by building secure networks of collaboration within different geographical areas of the world. Explores issues on all continents With discrete sections on the Americas, Africa and the Middle East, Europe, Asia, and the Pacific Rim, the book presents the work of researchers and practitioners who examine ways different societies have responded to environmental threats using innovative methods to cope with their vulnerabilities to disaster. Topics discussed include: A game approach that has been used as an effective tool in the communication of disaster risk information in the Caribbean Efforts to rebuild tourism in New Orleans despite the challenges presented by media coverage of Hurricane Katrina Faith-based organization (FBO) humanitarian assistance in the Muslim world Nongovernmental and community-based responses to the Asian tsunami and the Sumatran earthquake The book presents a multifaceted study that aims to foster dialogue among policymakers to reduce social vulnerability and build local and regional capacities to withstand

environmental assaults. Encouraging creative thinking, it offers ideas and solutions that have been successful in a range of environments worldwide. The authoritative scholarship presented combines interdisciplinary studies that will be valuable to a broad range of fields and professionals.

Handbook of Disaster Research

This book analyses the current knowledge on structural behaviour of RC elements and structures strengthened with composite materials (experimental, analytical and numerical approaches for EBR and NSM), particularly in relation to the above topics, and the comparison of the predictions of the current available codes/recommendations/guidelines with selected experimental results. The book shows possible critical issues (discrepancies, lacunae, relevant parameters, test procedures, etc.) related to current code predictions or to evaluate their reliability, in order to develop more uniform methods and basic rules for design and control of FRP strengthened RC structures. General problems/critical issues are clarified on the basis of the actual experiences, detect discrepancies in existing codes, lacunae in knowledge and, concerning these identified subjects, provide proposals for improvements. The book will help to contribute to promote and consolidate a more qualified and conscious approach towards rehabilitation and strengthening existing RC structures with composites and their possible monitoring.

Visualizing the Invisible

This book reflects an important shift in society's definition of disaster. For centuries catastrophic events have been considered "acts of God" and therefore uncontrollable by definition. *Managing Disaster* is international in scope, covering such natural and man-made calamities as tornadoes in western Pennsylvania, earthquakes in Peru, flooding in the Netherlands, and toxic waste disasters. Centers for hazard studies have only recently examined the interrelated aspects of disastrous events and recognized the interaction between natural hazards and human systems. As society attempts to acquire the information and develop the skills to reduce the risks and damage from disaster, an increasingly professional public service is reconsidering its strategies and policy direction. *Managing Disaster* addresses this problem and the need for a new approach to teaching this subject at the university level. Twenty-three professionals and scholars in public policy and administration--from universities, government, and the private sector--examine the basic issues confronting managers and public agencies in the face of disaster.

Living with Hazards, Dealing with Disasters: An Introduction to Emergency Management

This timely Handbook is based on the principle that disasters are social constructions and focuses on social science disaster research. It provides an interdisciplinary approach to disasters with theoretical, methodological, and practical applications. Attention is given to conceptual issues dealing with the concept "disaster" and to methodological issues relating to research on disasters. These include Geographic Information Systems as a useful research tool and its implications for future research. This seminal work is the first interdisciplinary collection of disaster research as it stands now while outlining how the field will continue to grow.

Public Health and Disasters

Emergency managers and officials have seen a tremendous increase in the planning responsibilities placed on their shoulders over the last decade. *Crisis Management and Emergency Planning: Preparing for Today's Challenges* supplies time-tested insights to help communities and organizations become better prepared to cope with natural and manmade disasters and their impacts on the areas they serve. Author and editor Michael J. Fagel, PhD, CEM has more than three decades of experience in emergency management and emergency operations. He has been an on-site responder to such disaster events as the Oklahoma City Bombing and the site of the World Trade Center in the aftermath of 9/11. He is an experienced professor, trainer, professional, and consultant and has pretty much seen it all. The book delves into this experience to present advanced emergency management and response concepts to disasters not often covered in other

publications. It includes coverage of planning and preparedness, public health considerations, vulnerability and impact assessments, hospital management and planning, sporting venue emergency planning, and community preparedness including volunteer management. Contributions from leading professionals in the field focus on broad responses across the spectrum of public health, emergency management, and mass casualty situations. The book provides detailed, must-read planning and response instruction on a variety of events, identifying long-term solutions for situations where a community or organization must operate outside its normal daily operational windows. This book has been selected as the 2014 ASIS Book of the Year.

Wiley Pathways Emergency Planning

The effects of a disaster on healthcare can range from conditions that immediately besiege the system with large numbers of patients, to catastrophes that strain its long-term sustainability. Nurses, as frontline health professionals, must have an understanding of the situations they may face before, during and after a disaster and they must develop the skills and strategies to provide effective and immediate care. *International Disaster Nursing* is the first truly comprehensive and internationally focused resource to address the diversity of issues and myriad scenarios that nurses and other health personnel could encounter during a disaster event. This text defines the many roles of the nurse within a multidisciplinary team, and aids the implementation of the community's disaster plans in a crisis. With an alarming increase in the occurrence of disasters in the last decade, *International Disaster Nursing* is the hallmark text in the field.

Disaster and Development

Since the first edition of *The Human Side of Disaster* was published in 2009, new catastrophes have plagued the globe, including earthquakes in Haiti and New Zealand, tornadoes in Alabama and Missouri, floods in numerous locations, Hurricane Sandy, and the infamous BP oil spill. Enhanced with new cases and real-world examples, *The Human Side of Disaster, Second Edition* presents an updated summary of the social science knowledge base of human responses to disaster. Dr. Drabek draws upon his 40-plus years of conducting research on individual, group, and organizational responses to disaster to illustrate and integrate key insights from the social sciences to teach us how to anticipate human behaviors in crisis. The book begins with a series of original short stories rooted within actual disaster events. These stories are woven into the entire text to demonstrate essential findings from the research literature. Dr. Drabek provides an overview of the range of disasters and hazards confronting the public and an explanation of why these are increasing each year, both in number and scope of impact. The core of the book is a summary of key findings regarding disaster warning responses, evacuation behavior, initial post-impact survival behavior, traditional and emergent

roles of volunteers, and both short-term and longer-term disaster impacts. The theme of "organized-disorganization" is used to illustrate multiorganizational response networks that form the key managerial task for local emergency managers. The final chapter provides a new vision for the emergency management profession—one that reflects a more strategic approach wherein disasters are viewed as non-routine social problems. This book will continue to be an invaluable reference for professionals and students in emergency management and public policy and aid organizations who need to understand human behavior and how best to communicate and work with the public in disaster situations.

International Disaster Nursing

This book presents the health emergency and disaster risk management (H-EDRM) research landscape, with examples from Asia. In recent years, the intersection of health and disaster risk reduction (DRR) has emerged as an important interdisciplinary field. In several landmark UN agreements adopted in 2015–2016, including the Sendai Framework for Disaster Risk Reduction 2015–2030, the 2030 Sustainable Development Goals (SDGs), the Paris climate agreement, and the New Urban Agenda (Habitat III), health is acknowledged as an inevitable outcome and a natural goal of disaster risk reduction, and the cross-over of the two fields is essential for the successful implementation of the Sendai Framework. H-EDRM has emerged as an umbrella field that encompasses emergency and disaster medicine, DRR, humanitarian response, community health resilience, and health system resilience. However, this fragmented, nascent field has yet to be developed into a coherent discipline. Key challenges include redundant research, lack of a strategic research agenda, limited development of multisectoral and interdisciplinary approaches, deficiencies in the science–policy–practice nexus, absence of standardized terminology, and insufficient coordination among stakeholders. This book provides a timely and invaluable resource for undergraduate and postgraduate students, researchers, scholars, and frontline practitioners as well as policymakers from across the component domains of H-EDRM.

The Human Side of Disaster

This legendary tale introduces young readers to Molly Williams, an African American cook for New York City's Fire Company 11, who is considered to be the first known female firefighter in U.S. history. One winter day in 1818, when many of the firefighting volunteers are sick with influenza and a small wooden house is ablaze, Molly jumps into action and helps stop the blaze, proudly earning the nickname Volunteer Number 11. Relying on historic records and pictures and working closely with firefighting experts, Dianne Ochiltree and artist Kathleen Kemly not only bring this spunky and little-known heroine to life but also show how fires were fought in early America.

Disasters such as the 9/11 terrorist attacks, the Indian Ocean Tsunami, and Hurricane Katrina illustrate the salience and complexity of disasters. Both scholars and practitioners therefore agree that we must take a more proactive and holistic approach to emergency management, which should logically be derived from a sound understanding of the academic literature and the most pressing concerns facing professionals in the field today. *Disciplines, Disasters and Emergency Management* reviews what is known about catastrophic events from the standpoint of various academic areas of study. The introductory chapter by the editor, David A. McEntire, discusses the importance of and difficulties associated with multi- and interdisciplinary research on disasters and emergency management. Well-known scholars such as Drabek, Gibbs, Pine, Scanlon, Sylves, Waugh, Zakour and others then join efforts with budding students who have recently been exposed to the disaster management profession. Their review of our current level of knowledge represents 23 disciplines including geography, engineering, sociology, gerontology, public administration, international relations, law, environmental management, criminal justice, and information science, etc. The concluding chapter summarizes the contributions of various disciplines, identifies potential research opportunities, and describes ways to address future disaster problems. Besides comparing the similarities and differences among the findings from diverse fields of study, *Disciplines, Disasters and Emergency Management* suggests that scholars may increase their comprehension of disasters by focusing attention on the unique concept of vulnerability. Recommendations for disaster reduction also make this a useful book for professionals in emergency management. Whether you are a seasoned expert in disaster research or a novice in emergency management, this book will help you acquire cutting-edge knowledge about disasters and emergency management.

Soft Targets and Crisis Management

Uniting the best of Michael Fagel and Jennifer Hesterman's books in the fields of homeland security and emergency management, the editors of this volume present the prevailing issues affecting the homeland security community today. Many natural and man-made threats can impact our communities—but these well-known and highly respected authors create order from fear, guiding the reader through risk assessment, mitigation strategies, community EOC planning, and hardening measures based upon real-life examples, case studies, and current research in the practice. As terrorist attacks and natural disasters continue to rock the world, *Soft Targets and Crisis Management* emphasizes the vulnerability of soft targets like schools, churches, and hospitals, and presents the methodology necessary to respond and recover in the event of a crisis in those arenas. Features:

- Based on ASIS award-winning texts
