They examine the purpose of the university, its evolution and change, its degree of autonomy, evaluations of performance and accountability, its role in guaranteeing human rights, financing, and efficiency and the influence of technology on instruction and structure - all issues that are highly relevant to university leaders and legislators who seek to form and fashion responsive and workable institutions and systems of higher education. The authors suggest measures needed to overcome organizational inertia and recognize the necessity of responsiveness to social and economic changes. Different aspects of worldwide human rights struggles that bear on the university are discussed - for instance the situation in South Africa, where higher education institutions are seeking to redress the misdeeds of the past. The authors also address the issue of public versus private institutional competition and the emergence of the private for-profit institution.

Around the world, legal information managers, law librarians and other legal information specialists work in many settings: law schools, private law firms, courts, government, and public law libraries of various types. They are characterized by their expertise in working with legal information in its many forms, and by their work supporting legal professionals, scholars, or students training to become lawyers. In an ever-shrinking world and a time of unprecedented technological change, the work of legal information managers is challenging and exciting, calling on specialized knowledge and skills, regardless of where in the world they practice their profession. Their role within legal systems contributes substantially to the administration of justice and the rule of law. This International Handbook addresses the policy and strategic issues with which legal information managers and law librarians need to engage in the context of the diverse legal environments in which they work. It provides resources, analysis, and considered studies on an international basis for seasoned professionals, those about to enter the field, and anyone interested in the evolution of legal information in the twenty-first century.

The inspiring idea of this workshop series, Artificial Intelligence Approaches to the Complexity of Legal Systems (AICOL), is to develop models of legal knowledge, concerning organization, structure and content, in order to promote mutual understanding and communication between different systems and cultures. Complexity and complex systems describe recent developments in AI and law, legal theory, argumentation, the Semantic Web, and multi-agent systems. The aim of the AICOL workshops is thus to offer effective support for the exchange of knowledge and methodological approaches between scholars from different scientific fields, by highlighting their similarities and differences. The comparison of multiple formal approaches to the law (such as logical models, cognitive theories, argumentation frameworks, graph theory, game theory), as well as opposite perspectives like internal and the external viewpoints, this volume stresses possible convergences, as, for instance, are possible in the realms of conceptual structures, argumentation schemes, emergent behaviors, learning evolution, adaptation, and simulation. This volume assembles 15 thoroughly refereed and revised papers, selected from two workshops organized at the XXIV World Congress of Philosophy of Law and Social Philosophy (IVR, Beijing, China, September 15-20, 2009) and at JURIX-09 (December 16-19, 2009, Rotterdam). The papers are organized in topical sections on language and complex systems in law, ontologies and the representation of legal knowledge, argumentation and logics, as well as dialogue and legal multimedia.

Electronic commerce is here to stay. No matter how big the dot-com crisis was or how far the e-entrepreneurs' shares fell in the market, the fact remains that there is still confidence in electronic trading. At least it would appear that investors are confident in e-companies again. However, not only trust of venture capitalists is of importance -- consumers also have to have faith in on-line business. After all, without consumers there is no e-business. Interacting lawyers, technicians and economists are needed to create a trustworthy electronic commerce environment. To achieve this environment, thorough and inter-disciplinary research is required and that is exactly what this book is about. Researchers of the project Enabling Electronic Commerce from the Dutch universities of Tilburg and Eindhoven have chosen a number of e-topics to elaborate on trust from their point of view. This volume makes clear that the various disciplines can and will play a role in developing conditions for trust and thus contribute to a successful electronic market.

"No provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider." Did you know that these twenty-six words are responsible for much of America's multibillion-dollar online industry? What we can and cannot write, say, and do online is based on just one law—a law that protects online services from lawsuits based on user content. Jeff Kosseff exposes the workings of Section 230 of the Communications Decency Act, which has lived mostly in the shadows since its enshrinement in 1996. Because many segments of American society now exist largely online, Kosseff argues that we need to understand and pay attention to what Section 230 really means and how it affects what we like, share, and comment upon every day. The Twenty-Six Words That Created the Internet tells the story of the institutions that flourished as a result of this powerful statute. It introduces us to those who created the law, those who advocated for it, and those involved in some of the most prominent cases decided under the law. Kosseff assesses the law that has facilitated freedom of online speech, trolling, and much

more. His keen eye for the law, combined with his background as an award-winning journalist, demystifies a statute that affects all our lives –for good and for ill. While Section 230 may be imperfect and in need of refinement, Kosseff maintains that it is necessary to foster free speech and innovation. For filings from many of the cases discussed in the book and updates about Section 230, visit jeffkosseff.com

China is a major civil law jurisdiction. Since the end of the 1990s great efforts have been made in China to codify the entire civil law. With the major statutes governing contracts, property, torts and conflict of laws promulgated in 1999, 2007, 2009 and 2010 respectively, the most crucial steps have been taken towards the creation of a Chinese Civil code. This book attempts to shed light on both the theoretical and the practical aspects of Chinese civil law, while extensive footnotes and a detailed bibliography and index allow for further study of specific areas and facilitate systematic research. The book addresses the following topics: Part I General, Part II Contracts, Part III Tort Law, Part IV Property Law, Part V Conflict of Laws. Main features: Combination of an overall picture of the specific field of law at issue and thorough analysis of fundamental issues. Combination of black letter law and law in action. Selected bibliography of publications in English, information on English translations of Chinese regulations available in the public domain, lists of the relevant statutes and judicial interpretations, as well as cases.

Tolley's Managing Email & Internet Use

Essay from the year 2014 in the subject Law - Media, Multimedia Law, Copyright, grade: A, Stanford University, language: English, abstract: Wikileaks and peer-to-peer (torrenting) networks have not only allowed for piracy (illegally downloading movies and music without paying the distributors) but have also enabled free access to education in developing countries, and increased transparency for the public to control corporations and governments by making confidential information public. People can now freely distribute government, military and corporate materials without asking for permission from the original creators of those materials. This information revolution has also exposed information about various

crimes such as a swiss bank Julius Baer's money-laundering documents, unreported civilian deaths in the Afghan war, and the National Security Agency's online spy campaign on American citizens. Governments and privates are concerned about these leaks and the potential of future exposures due to the lack of regulation of the internet. This fear by powerful corporations and states has led to increased interest in controlling and limiting the free access to information in multiple ways, including the criminalization of piracy and illegal document sharing, both via websites like wikileaks and via peer-to-peer networks like torrents. Criminalizing piracy (copyright violations) when there is no profit involved, encourages monopolistic economies, limits education, and enables censorship and control of citizens, so we as users and citizens should publicly discourage policymakers from passing legislation to further criminalize and prosecute internet users who violate copyright law via piracy or document sharing when there is no direct profit involved.

The area of Information Technology & Lawyers is a fascinating one. Both from a practical and an academic perspective the opportunities of applying Information Technology to law are tremendous. At the same time, however, lawyers are amongst the most conservative professionals, and traditional late adapters of technology. Nowadays the gap between Information Technology & Lawyers is closing more and more, in particular due to the Internet and the richness of legal sources that can be found online. This book provides material to further bridge the gap by showing people with a legal background what is possible with Information Technology now and in the near future, as well as by showing people with an IT background what opportunities exist in the domain of law. Any lawyer should read this book about the current practice of IT in the legal domain, and what is to be expected in the near future. The book is meant for both practitioners and

academics, and can serve in any (post)graduate courses on computer science, law, business, etc. The editors Arno R. Lodder and Anja Oskamp are both affiliated to the Computer/Law Institute of the Vrije Universiteit Amsterdam, and before co-edited books on IT support of the Judiciary, as well as the first two editions of the Dutch handbook on IT & Lawyers.

Barack Obama's famous "Blueprint for Change," part and parcel of the campaign that culminated in his historic election as U.S. president in November 2008, openly announced his support for the Employee Free Choice Act (H.R. 1409) suggesting that major change was imminent in U.S. labor and employment law. Although promised legislative change has yet to materialize, there appears to be a growing consensus that the current system for addressing employment disputes in union-represented and non-union workplaces deserves renewed attention and needs significant restructuring. Thus, the issues taken up by this prominent U.S. conference remain relevant to policy debates which will likely continue to rage in the United States for years to come. Based on papers delivered at the 2009 conference of the New York University School of Law's Center on Labor and Employment Law - the 62nd in this venerable and highly influential series - the book presents articles updated by the authors to reflect more recent developments, as well as new papers to ensure a comprehensive and current analysis of both what has actually changed and which trends seem to be gaining momentum. Twenty-two outstanding scholars and practitioners in U.S. labor law and practice pay special attention to such issues as the following: mandatory arbitration of employment disputes in non-union sector; call for improved administration of the National Labor Relations Act in expediting elections and reinstating discriminatees; more privatized forms of dispute resolution such as arbitration and mediation; card-check and neutrality agreements bypassing government processes; proposed reform of the Age Discrimination in Employment Act; evaluating market-based defenses to pay equity claims; EEOC initiatives in public enforcement of equality law; and challenges to labor relations in state and local governments.
