Highway Code for Motorcyclists

This first book in the Marcelli Sisters of Pleasure Road series features three beautiful sisters, a family steeped in tradition, and a secret from the past that threatens to rock their once perfect worlds. A party planner extraordinaire, Katie Marcelli loves her big, boisterous family—even when their chronic matchmaking drives her crazy! In the Marcelli household, fine wine and good food are as celebrated as true love, so when her eighteen-year-old sister announces her engagement, Katie promises her the perfect wedding. There's only one hitch: the father of the groom, Zach Stryker, who is adamantly opposed to his son marrying so young. Now, despite her instant attraction to the handsome, arrogant attorney, Katie must approach with caution: Zach, who hired Katie for a major fundraiser, holds the fate of her business in his hands—and how can she trust a man who is willing to break her sister's heart? It will take a passionate battle of wills to determine if wedding bells will ring for a Marcelli bride, and to unlock the deepest desires—for family, love, and home—inside a strong-willed man's heart.

The Encyclopedia of the Motorcycle

A significant body of Caribbean sociological literature is either scattered, difficult to access, or out of print. This publication addresses this problem by bringing the literature together in a single volume. This comprehensive collection is divided into twelve sections, beginning with a general introduction that reviews Caribbean sociological development. The subsequent sections explore the themes of Caribbean social theory, social stratification, ethnicity, culture and identities, women and gender, education, and modernization, as well as emerging topics of discussion, namely domestic violence, child and sexual abuse, labor market conditions, population and demographic change and indigenous African-derived religions. Christine Barrow is a lecturer in sociology at the University of the West Indies in Barbados. Rhoda Reddock, University of the West Indies, is head of the Center for Gender and Development Studies in St. Augustine, Trinidad.

The Motorcycle Encyclopaedia is a complete and comprehensive reference work. The book is designed in two major sections. The first is a photo-gallery of over 400 classic motorbikes, alphabetically arranged by manufacturers, with all their significant models covered in detail. The second section lists every maker from the inception of motorcycling to the present day, and includes rare photographs and design blueprints. Each manufacturer is profiled, from ABC to Sundapp through giants of the industry like Honda and extinct but fondly remembered producers like Vincent and Velocette.

Preston Tucker and His Battle to Build the Car of Tomorrow

"Divorced, beheaded, died, divorced, beheaded, survived" Admired, vilified, de-humanised. Three Catherines, two Annes and a Jane. Six women with one thing in common - marriage to a man called Henry - have passed into historical legend. Of course, it couldn't happen these days Six modern women have also married one man. Their lives are both separate and intertwined as they tell their stories from a room in which they have all once lived. Their experiences - miscarriage, love affairs, betrayal, and a shared loathing of all things ginger - are portrayed with humour, pathos and a great deal of wine. The plight of those sixteenth century women is personal, poignant and still relevant five hundred years on.

A recent trend in personal development is life coaching: it's somewhere between

having a personal trainer and a therapist, someone to check up on you and make sure you are doing what you need to do to achieve your personal and professional goals. Life coaches focus on the future not the past, they look at obstacles to success and fulfillment not to open them up for introspection but to overcome them and achieve goals.

The primary skill needed by anyone who works in fashion is the ability to convey—to clients and the general public alike—images of the designs. The impression given to the viewer depends on whether the fashion design drawings are good. Contemporary Fashion Illustration Techniques thoroughly describes the basics of fashion illustration, and covers the latest trends such as vivid images, sprightly movement, and garment material texture. After all, fashion drawing is not simply about sketching a body and face; only when you accurately reproduce the garments and their colors can the designs truly come to life.

In striving for optimal comfort and safety conditions in road vehicles, today's electronically controlled components provide a range of new options. These are developed and tested using computer simulations in software in the loop or hardware in the loop environments—an advancement that requires the modern automotive engineer to be able to build basic simulation models, handle higher level models, and operate simulation tools effectively. Combining the fundamentals of vehicle dynamics with the basics of computer simulated modeling, *Road Vehicle Dynamics: Fundamentals and Modeling Aspects* draws on lecture notes from undergraduate and graduate courses given by the author, as well as industry seminars and symposiums, to provide practical insight on the subject. Requiring only a first course in dynamics and programming language as a prerequisite, this highly accessible book offers end-of-chapter exercises to reinforce concepts as well as programming examples and results using MATLAB®. The book uses SI-units throughout, and begins with an introduction and overview of units and quantities, terminology and definitions, multibody dynamics, and equations of motion. It then discusses the road, highlighting both deterministic and stochastic road models; tire handling including contact calculation, longitudinal and lateral forces, vertical axis torques, and measurement and modeling techniques; and drive train components and concepts such as transmission, clutch, and power source. Later chapters discuss suspension systems, including a dynamic model of rack-and-pinion steering as well as double-wishbone suspension systems; force elements such as springs, anti-roll bars, and hydro-mounts; and vehicle dynamics in vertical, longitudinal, and lateral directions using a simple model approach to examine the effects of nonlinear, dynamic, and active force elements. Highlighting useable knowledge, the book concludes with a three-dimensional vehicle model and typical results of standard driving maneuvers.

Grob's Basic Electronics

This book is the first comprehensive post-war history of one of Europe's most

vibrant cities throughout an extraordinary period of social, cultural and economic change. The capital of Italy's economic miracle of the 1950s and 60s, Milan was a magnet for immigrants, as industry, design and culture created a heady mix of wealth, innovation and conflict. By the 1980s, heavy industry had all but disappeared and the city had reinvented itself as the world capital of fashion and a dynamic post-industrial metropolis. Meanwhile, the urban landscape was darkened by the bleak estates of the peripheries and the corruption scandals that exploded in what became known as 'Tangentopoli', or Bribesville. This fascinating book traces Milan's 'biography' through its buildings, design, fashion, cinema, families, immigrants and television. The city emerges as a potent economic power-house and laboratory for change, where art and culture converge in a modern but problematic urban space. Anyone interested in Italian history, urban studies or the future of Europe's cities will find this book an essential read.

In the wake of World War II, the U.S. automobile industry was fully unprepared to meet the growing demands of the public, for whom they had not made any cars for years. In stepped Preston Tucker, a salesman extraordinaire who announced the building of a revolutionary new car: the Tucker '48, the first car in almost a decade to be built fresh from the ground up. Tucker's car, which would include ingenious advances in design and engineering that other car companies could not match, captured the interest of the public, and automakers in Detroit took notice. Here, author Steve Lehto tackles Tucker's amazing story, relying on a huge trove of documents that has been used by no other writer to date. It is the first comprehensive, authoritative account of Tucker's magnificent car and his battles with the government. And in this book, Lehto finally answers the question automobile aficionados have wondered about for decades: exactly how and why the production of such an innovative car was killed.
