Peruvian Cuisine is considered one of the most diverse in the world and is on par with French, Chinese and Indian cuisine. Thanks to its pre-Incas and Inca heritage and to Spanish, Basque, African, Sino-Cantonese, Japanese and finally Italian, French and British immigration, Peruvian cuisine combines the flavors of four continents. This book on Peruvian Cuisine includes recipes for Adobo de Chancho , Aji de Gallina, Alfajores, Anticuchos, Arroz con Leche, Arroz con Mariscos, Arroz con Pollo, Arroz Tapado, Bistec a lo Pobre, Causa Rellena con Pollo, Ceviche, Chicha Morada, Chicharrón de Cerdo, Choros a la Chalaca (Mussels Peruvian Style), Chupe de Camarones, Crab Causa, Ensalada de Pallares (Lima Bean Salad), Estofado de Pollo (Chicken Stew), Lomo Saltado, Ocopa de Camarones, Papas a la Huancaína, Papa Rellena, Pescado a la Chorrillana, Pisco Sour, Pulpo al

Designed for the practising organic chemist, this book details over a hundred experimental procedures using sulfur compounds in organic synthesis. Many of these methods are new to the literature, having been published since 1991, and illustrate the striking versatility of the use of sulfur reagents. Examples are simple to perform and extremely useful, and as such this book will be an invaluable aid to all involved in synthetic organic chemistry, whether in academic or industrial laboratories.

Transition Metal Organometallics in Organic Synthesis, Volume II covers chapters on the applications of arene and alkyne complexes, as well as cluster compounds, in organic synthesis. The book discusses the potential utility of transition metal-alkyne complexes and derived cluster compounds as reagents in organic synthesis, as well as the complexation reactions of arenes. The text also describes the oxidation, reduction, rearrangement, and other synthetically useful processes. Chemists will find the book invaluable.

Deep learning doesn't have to be intimidating. Until recently, this machine-learning method required years of study, but with frameworks such as Keras and Tensorflow, software engineers without a background in machine learning can quickly enter the field. With the recipes in this cookbook, you'll learn how to solve deep-learning problems for classifying and generating text, images, and music. Each chapter consists of several recipes needed to complete a single project, such as training a music recommending system. Author Douwe Osinga also provides a chapter with half a dozen techniques to help you if you're stuck. Examples are written in Python with code available on GitHub as a set of Python notebooks. You'll learn how to: Create applications that will serve real users Use word embeddings to calculate text similarity Build a movie recommender system based on Wikipedia links Learn how AIs see the world by visualizing their internal state Build a model to suggest emojis for pieces of text Reuse pretrained networks to build an inverse image search service Compare how GANs, autoencoders and LSTMs generate icons Detect music styles and index song collections

Tin in Organic Synthesis is a systematic presentation of the organic chemistry of tin. This book discusses the significant advances that have been made with regard to the applications of organotin compounds as reagents or intermediates in organic synthesis and points out directions for future developments. This monograph is comprised of 17 chapters divided into four sections. Following a brief introduction to organotin chemistry, the production of the organotin reagents, which are most usually employed in organic synthesis, is described. Special emphasis is placed on the creation of a fresh tin-carbon bond, a preliminary step in numerous fruitful applications. The following chapters are devoted to synthetic applications involving tin-hydrogen, tin-carbon, and tin-heteroatom bonds. The reduction of organic halides, carbonyl compounds, thio, nitrogen compounds, unsaturated carbon-carbon bonds, and seleno and telluro compounds is considered. The discussion then turns to electrophilic cleavages of tin-carbon bonds, which are of possible interest in organic synthesis, along with transmetallation and metallation of organotin compounds. The creation of new carbon-carbon bonds through substitution, addition, or elimination reactions is also examined. The remaining chapters focus on organotin alkoxides, organotin enolates, organotin oxides and peroxides, and

organotin esters. This book will be of interest to students and researchers in the field of organic chemistry.

Carl Sommer has unusual qualifications for writing this book on education: He has taught high school students in New York City, counseled students and parents as a high school assistant dean of boys in a school with 3,600 pupils, worked as a foreman of a tool and die shop and managed a manufacturing plant. Shortly after becoming a high school teacher Sommer discovered something seriously wrong with the education his students received; for ten years he researched the problem. Though he had a college degree, to validate his teacher's license he attended Oswego State University, City College of New York, and New York University. While attending New York University he had the privilege of using Bobst Library, the largest research library in New York City, to help him in his investigation. To discover solutions to the problems plaguing American education, he sent a survey to 115 principals, 49 of whom responded. He has personally interviewed parents, students, teachers, assistant principals, and principals. Since the book covers such a multitude of problems and solutions, he has had numerous individuals, both

black and white, read portions of the book: parents, lawyers, ministers, teachers, principals, a college professor, and superintendents of schools. With his parental and managerial background Sommer examines the schools from without the system, and with his counseling and educational background, from within. Though exposing many current weaknesses of today's education, Sommer constantly strives to promote practical solutions for successful schools.
