Introductory Accounting, Finance and Auditing for Lawyers, Fourth Edition, continues to be packed with incisive substance on accounting and finance, and also emphasizes the role of auditing in the financial reporting process, an element given substantial new weight under the Sarbanes-Oxley Act. The Fourth Edition reflects the significant developments in the world of accounting, finance and auditing, including those generated by the major scandals such as Enron and the responses generated by Sarbanes-Oxley, from the Act itself, to the Public Company Accounting Oversight Board (PCAOB) to the SEC. The book retains the same basic architecture, narrative style, problems, and pitch to law students as in previous editions, and adds substantial new material. Additions include three entirely new Chapters, several new Sections added to existing Chapters, new Tables, and enhanced technical formatting. New Chapters include Audit Practice, an introduction to the key features of a financial audit including an Illustration and Problem concerning the leading statistical sampling techniques auditors apply in tests of internal control over financial reporting. Another new Chapter is Finance Theory, a rigorous but still introductory account of modern portfolio theory, CAPM and efficient market theory with critiques from behavioral finance inspired in part by the Enron-style accounting scandals. Previous users of the book will find all the familiar Illustrations and Problems, along with a solid dose of new materials geared

toward the increasing reliance being placed on auditing, audit committees, and corporate governance in the era ushered in by Sarbanes-Oxley and PCAOB.

Principles of Accounting Volume 1 - Financial Accounting

Introductory Accounting, Finance and Auditing for Lawyers

This text is intended for a first course in introductory financial accounting. It was updated to reflect current International Financial Reporting Standards (IFRS). For example, it reflects the recent change in IAS38, para. 98, allowing the use of multiple methods in amortizing intangible assets. It focuses on core Introductory Financial Accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. Excluded are advanced topics that are covered in Intermediate Financial Accounting, such as leases and bond amortization. The text takes a corporate approach (vs. beginning with a sole proprietorship emphasis and then converting to a corporate approach); this consistency throughout the book reduces confusion for the introductory student. The book covers all essential topics: the accounting cycle, merchandising, assigning costs to inventory, cash and receivables, property, plant and equipment, debt financing, equity financing, statement of cash flows, financial statement analysis, and proprietorships and partnerships. Additionally, this version of the open text is supported by Lyryx Learning, offering at an affordable price editorial

services to develop and adapt the content, formative online assessment, course supplements, and daily support to both the students and instructors.
