Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and

### **Technical Writing Process**

A practical guide to managing technical writing projects and tech writing departments, covering hiring, evaluation, management, internal and external customer relations, estimating and tracking tech writing projects, running a tech writing business as a solo contractor or as a manager, selling writing services, contracts and work orders, outsourcing, technical training development & delivery, and more. From the Introduction: "There are many books available on the techniques of technical writing, primarily for beginners and practitioners of tech writing. But there are very few books on how to manage the technical writing

group in a company or how to manage a technical writing business (whether you're on your own as a freelancer or you have writers working for you). If you are a tech writer who manages other writers, or if you are a non-writer who manages writers, this book is for you. The sections on managing tech writing projects show a methodology specific to technical documentation. If you want to learn general management and project management techniques-and you should-that information already exists. What this book aims for is to provide you as a manager of technical writing with the specifics that you won't easily find elsewhere. Secondarily, this book aims to give new managers, and future managers, a leg up on how to actually run a technical publications group, based on some 20 years of experience in the field. There are different situations in which someone becomes a manager of a technical publications group. Sometimes a writer grows into the role within a company as the department grows, sometimes tech writers are subsumed under some other group - I've seen writers belonging to support, testing, marketing, and infrastructure groups - and the person in charge of technical writing in the company isn't actually a writer and may never have been one. Tech writers who set up their own freelance business have their own specific needs: not only are they the managers, they're also the writers. Finally, owners or managers of tech writing agencies, whether or not they are writers themselves, have business issues specific to a tech writing business to consider." ## **The Elements of Style**

Every complex product needs to be explained to its users, and technical writers, also known as technical communicators, are the ones who do that job. A growing field, technical writing requires multiple skills, including an understanding of technology, writing ability, and great people skills. Whether you're thinking of becoming a technical writer, just starting out, or you've been working for a while and feel the need to take your skills to the next level, *The Insider's Guide to Technical Writing* can help you be a successful technical writer and build a satisfying career. Inside the Book Is This Job for Me? What does it take to be a technical writer? Building the Foundation: What skills and tools do you need to get started? The Best Laid Plans: How do you create a schedule that won't make you go crazy? How do you manage different development processes, including Agile methodologies? On the Job: What does it take to walk into a job and be productive right away? The Tech Writer Toolkit: How do you create style guides, indexes, templates and layouts? How do you manage localization and translation and all the other non-writing parts of the job? I Love My Job: How do you handle the ups and downs of being a technical writer? A unique, integrative, team-centered approach to writing and formatting technical documents

**Technical Professionals:** Do you have difficulty producing high-quality documents with multiple contributors when faced with a tight deadline? Do you need a process that enables global team members to collaborate online as they produce sophisticated documents? Do you prefer the ease of a WYSIWG desktop publishing tool like Microsoft Word rather than more complex software like LaTeX?

**Professors and Graduate Students:** Do you want to streamline the process of writing multi-investigator papers, reports, proposals, and books? Do you spend a lot of time formatting documents instead of thinking and writing? Do you write research papers in Microsoft Word and then need to convert them to LaTeX for your thesis? Do you write research papers in LaTeX and then need to convert them to Microsoft Word when embarking on collaborations with your colleagues from industry?

**Undergraduate Students:** Do you need to write a research paper and don't know where to start? Do you need to collaborate with classmates on a long paper and find yourself lost in organizational details rather than immersed in the content? If you answered "yes" to any of these questions, *Technical Writing for Teams: The STREAM Tools Handbook* is for you. It provides an easy-to-learn system that streamlines individual and collaborative writing, allowing you and your teams to instantly become more productive and create the highest quality documents in a minimum amount of time. Introduced here are the STREAM Tools—Scientific and Technical wRiting, Editing, And file Management Tools—which unlock your collaborators' potential and addresses team dynamics, separation of duties, and

## **An Introduction to Modern Econometrics Using Stata**

New Essays in Technical and Scientific Communication represents the most important collection of writings about technical communications ever compiled. Focusing on a wide range of theoretical and practical issues, these essays reflect the rigor, vitality, and interdisciplinary nature of modern technical communications. This represents a collection of the very best scholarly work being done.

## **The Tech Writer's Survival Guide**

Integrating a contemporary approach to econometrics with the powerful computational tools offered by Stata, *An Introduction to Modern Econometrics Using Stata* focuses on the role of method-of-moments estimators, hypothesis testing, and specification analysis and provides practical examples that show how the theories are applied to real data sets using Stata. As an expert in Stata, the author successfully guides readers from the basic elements of Stata to the core econometric topics. He first describes the fundamental components needed to effectively use Stata. The book then covers the multiple linear regression model, linear and nonlinear Wald tests, constrained least-squares estimation, Lagrange multiplier tests, and hypothesis testing of nonnested models. Subsequent chapters center on the consequences of failures of the linear regression model's assumptions. The book also examines indicator variables, interaction effects, weak instruments, underidentification, and generalized method-of-moments estimation. The final chapters introduce panel-data analysis and discrete- and limited-dependent variables and the two appendices discuss how to import data into Stata and Stata programming. Presenting many of the econometric theories used in modern empirical research, this introduction illustrates how to apply these concepts using Stata. The book serves both as a supplementary text for undergraduate and graduate students and as a clear guide for economists and financial analysts.

## **A Treatise on the Astrolabe**

With this new edition, *Science and Technical Writing* confirms its position as the definitive style resource for thousands of established and aspiring technical writers. Editor Philip Rubens has fully revised and updated his popular 1992 edition, with full, authoritative coverage of the techniques and technologies that have revolutionized electronic communications over the past eight years.

### **How to Write Technical Reports**

Technical Writing equips students with the tools and knowledge required to write clear, concise, and well-organized technical documents. This comprehensive guide encourages students to carefully consider word choice, sentence construction, document organization and formatting, the use of visual queuing, and more to create easy-to-read, high-impact technical documents. The text begins by outlining the major differences between academic papers and technical documents, and discussing critical elements to consider when writing technical documents including audience, the goal of the document, readers' expectations, organization, and more. Later chapters address technical writing style, the importance of design, the basics of cognitive theory, and various types of communication documents. Students learn how to tailor writing for the technology industry, successfully incorporate research into technical documents, and create technical reports. The book concludes by walking students through setting up a professional portfolio of their work, addressing portfolio organization, topical strategy, strategic layout, and potential legal issues. Technical Writing is an accessible and comprehensive guide designed to help students write technical documents confidently and efficiently.

The text is well suited for undergraduate courses in technical writing, communications, computer science, and engineering. Suzanne Disheroon, Ph.D., is a professor of English at Cedar Valley College, where she teaches courses in technical writing, composition, and literature. She earned her master's and doctorate degrees in English from the University of North Texas. Dr. Disheroon's areas of expertise include the writing and development of technical manuals, instructional design, grant writing, and editing. Kenneth R. Price teaches graduate and undergraduate professional and technical communication courses at Texas A&M University-Kingsville. He is a graduate faculty member at Missouri State University; California State University, Chico (where he directed the professional/technical writing program); the University of Alaska Anchorage; Western Carolina University; and the University of Wisconsin-River Falls. He was also a software documentation consultant to Macromedia.

written. Not since 1872 has a free-standing edition of A Treatise the Astrolabe been published. Thanks to the expertise of its editor, Sigmund Eisner, who supplies sixty-eight illustrations, this Variorum edition provides a more detailed exposition than previously available. Eisner's extensive labors result in the first complete record of textual variants found in the thirty-two surviving manuscripts of the work and in all the major printed text published between 1532 and 1987. This landmark edition also presents a thorough digest of all published commentary on Chaucer's treatise. Amplified by sixty-eight illustrations, this variorum edition of Chaucer's A Treatise on the Astrolabe provides a more detailed exposition of the treatise than has ever before been available.

The Start-to-Finish, Best-Practice Guide to Implementing and Using DITA Darwin Information Typing Architecture (DITA) is today's most powerful toolbox for constructing information. By implementing DITA, organizations can gain more value from their technical documentation than ever before. Now, three DITA pioneers offer the first complete roadmap for successful DITA adoption, implementation, and usage. Drawing on years of experience helping large organizations adopt DITA, the authors answer crucial questions the "official" DITA documents ignore, including: Where do you start? What should you know up front? What are the pitfalls in implementing DITA? How can you avoid those pitfalls? The authors begin with topic-based writing, presenting proven best practices for developing effective topics and short descriptions. Next, they address content architecture, including how best to set up and implement DITA maps, linking strategies, metadata, conditional processing, and content reuse. Finally, they offer "in the trenches" solutions for ensuring quality implementations, including guidance on content conversion. Coverage includes: Knowing how and when to use each DITA element—and when not to Writing "minimalist," task-oriented information that quickly meets users' needs Creating effective task, concept, and reference topics for any product, technology, or service Writing effective short descriptions that work well in all contexts Structuring DITA maps to bind topics together and provide superior navigation Using links to create information webs

### **Technical Writing Management**

Created to help scientists and engineers write computer code, this practical book addresses the important tools and techniques that are necessary for scientific computing, but which are not yet commonplace in science and engineering curricula. This book contains chapters summarizing the most important topics that computational researchers need to know about. It leverages the viewpoints of passionate experts involved with scientific computing courses around the globe and aims to be a starting point for new computational scientists and a reference for the experienced. Each contributed chapter focuses on a specific tool or skill, providing the content needed to provide a working knowledge of the topic in about one day. While many individual books on specific computing topics exist, none is explicitly focused on getting technical professionals and students up and running immediately across a variety of computational areas.
