Weekly Times Technical Annual

Australian Farm Journal

From the bestselling author of *The Land Girls* comes a beautifully realised novel that speaks to the true history and real experiences of post-war Australian women. Sydney 1945 The war is over, the fight begins. The war is over and so are the jobs (and freedoms) of tens of thousands of Australian women. The armaments factories are making washing machines instead of bullets and war correspondent Tilly Galloway has hung up her uniform and been forced to work on the women's pages of her newspaper - the only job available to her - where she struggles to write advice on fashion and make-up. As Sydney swells with returning servicemen and the city bustles back to post-war life, Tilly finds her world is anything but normal. As she desperately waits for word of her prisoner-of-war husband, she

begins to research stories about the lives of the underpaid and overworked women who live in her own city. Those whose war service has been overlooked; the freedom and independence of their war lives lost to them. Meanwhile Tilly's waterside worker father is on strike, and her best friend Mary is struggling to cope with the stranger her own husband has become since being liberated from Changi a broken man. As strikes rip the country apart and the news from abroad causes despair, matters build to a heart-rending crescendo. Tilly realises that for her the war may have ended, but the fight is just beginning

Questions about how children grow up in their social worlds are of enormous significance for parents, teachers, and society at large, as well as for children themselves. Clearly children are shaped by the social world that surrounds them but they also shape the social worlds that they, and those significant to them, encounter. But exactly how does this happen, and what can we do to ensure that it produces happy outcomes? This book provides a critical review of the psychological literature on the development of personality, social cognition, social skills, social relations and social outcomes from birth to early adulthood. It uses Bronfenbrenner's model of the development of the person and up-to-date evidence

to analyse normal and abnormal social development, prosocial and antisocial behaviour, within and across cultures. As well as outlining the theory, the book addresses applied issues such as delinquency, school failure, and social exclusion. Using a coherent theoretical structure, *The Child as Social Person* examines material from across the biological and social sciences to present an integrated account of what we do and do not know about the development of the child as a social actor. *The Child as Social Person* provides an integrated overview of the exciting field of developmental social psychology, and as such will be essential reading for advanced undergraduate students in psychology, education and social work, as well as postgraduates and researchers in these disciplines.

Farm Equipment Red Book Issue

In a scientific pursuit there is continual food for discovery and wonder. M. Shelley (1818) Genomic analysis of aquatic species has long been overshadowed by the superb activity of the human genome project. However, aquatic genomics is now in the limelight as evidenced by the recent accomplishment of fugu genome sequencing, which provided a significant foundation for comparative fish genomics. Undoubtedly, such progress will provide an exciting and unparalleled boost to our knowledge of the genetics of aquatic species. Thus, aquatic genomics research has become a promising new research field with an impact on the fishery industry. It is noteworthy that the Food and Agriculture Organization (FAO) of the United Nations has projected that current global fisheries production will soon become insufficient to supply the increasing world population and that aquaculture has a great potential to fulfill that demand. This book, *Aquatic Genomics: Steps Toward a Great Future*, was designed as a collection of advanced knowledge in aquatic genomics and biological sciences. It covers a variety of aquatic organisms including fish, crustaceans, and shellfish, and describes various advanced methodologies, including genome analysis, gene mapping, DNA markers, and EST

analysis. Also included are discussions of many subjects such as regulation of gene expression, stress and immune responses, sex differentiation, hormonal control, and transgenic fishes.
