Code 2000 Edition

National Fire Codes

This comprehensive code comprises all building, plumbing, mechanical, fuel gas and electrical requirements for one- and two-family dwellings and townhouses up to three stories. The IRC contains many important changes such as: An updated seismic map reflects the most conservative Seismic Design Category (SDC) based on any soil type and a new map reflects less conservative SDCs when Site Class A, B or D is applicable. The townhouse separation provisions now include options for using two separate fire-resistant-rated walls or a common wall. An emergency escape and rescue opening is no longer required in basement sleeping rooms where the dwelling has an automatic fire sprinkler system and the basement has a second means of egress or an emergency escape opening. The exemption for interconnection of smoke alarms in existing areas has been deleted. New girder/header tables have been revised to incorporate the use of #2 Southern Pine in lieu of #1 Southern Pine. New tables address alternative wood stud heights and the required number of full height studs in high wind areas.

If there is one book every professional electrical designer, installation electrician, electrical inspector, consulting engineer, and contractor cannot afford to be without, it's *Electrical Raceways and Other Wiring Methods* by the authority on all things electrical, Richard Loyd! From power source to end-use equipment, this one-of-a-kind electrician's handbook details specific design criteria, wiring methods, and materials for all types of installations as required by the 2002 National Electrical Code (NEC®). This is especially important, since the wiring section in the 2002 NEC® constitutes the largest and most sweeping change to the Code® in recent history. Other important NFPA standards are also referenced throughout the book as appropriate, making this the single most authoritative building design how-to and reference book available today.
