Dermatology Made Easy is based on the hugely popular DermNet New Zealand website and is designed to help GPs, medical students and dermatologists diagnose skin conditions with confidence. The book starts by providing a series of comprehensive tables, complete with over 500 thumbnail photos, to aid diagnosis according to symptoms, morphology, or body site. Once you have narrowed down the diagnosis, cross-references then guide you to more detailed descriptions, and another 700 photographs, covering:

- ◆ common infections
- ◆ inflammatory rashes
- ◆ non-inflammatory conditions
- ◆ skin lesions

Every section provides consistent information on the disorder:

- ◆ who gets it and what causes it?
- ◆ what are the clinical features and does it cause any complications?
- ◆ how do you diagnose it?
- ◆ how do you treat it and how long does it take to resolve?

The book concludes with a comprehensive section on further investigations and treatment options. Dermatology Made Easy combines the essential focus of the Made Easy book series with the authority and knowledge base of DermNet New Zealand's unparalleled resources. Printed in full colour throughout.

Based on the results from his pediatric practice of more than eleven thousand children, as well as data from other credible and scientifically minded medical doctors, Dr. Paul's vaccine-friendly protocol gives readers • recommendations for a healthy pregnancy and childbirth • vital information about what to expect at every well child visit from birth through adolescence • a slower, evidence-based vaccine schedule that calls for only one aluminum-containing shot at a time • important questions to ask about your child's first few weeks, first years, and beyond • advice about how to talk to health care providers when you have concerns • the risks associated with opting out of vaccinations • a practical approach to common illnesses throughout the school years • simple tips and tricks for healthy eating and toxin-free living at any age *The Vaccine-Friendly Plan* presents a new standard for pediatric care, giving parents peace of mind in raising happy, healthy children. Many universities now offer a course in biomedical optics, but lack a textbook specifically addressing the topic. Intended to fill this gap, An Introduction to Biomedical Optics is the first comprehensive, introductory text describing both diagnostic and therapeutic optical methods in medicine. It provides the fundamental background needed for graduate students in biomedical and electrical engineering, physics, biology, and medicine to learn about several biomedical optics issues. The textbook is divided into three main sections: general optics theory, therapeutic applications of light, and diagnostic optical methods. Each chapter has different levels of detail to build students' knowledge from one level to the next. The first section covers the history of optics theory and the basic science behind light-tissue interactions. It also introduces the relevant approaches and approximations used to describe light propagation in turbid biological media. In the second section, the authors look more closely at light-tissue interactions and their applications in different medical areas, such as wound healing and tissue welding. The final section examines the various diagnostic methods that are employed using optical techniques. Throughout the text, the authors employ numerical examples of clinical and research requirements. Fulfilling the need for a concise biomedical optics textbook, An Introduction to Biomedical Optics addresses the theory and applications of this growing field.

My Feet Are Killing Me!

Richard L Blake, D.P.M. is a practicing podiatrist in San Francisco, California, at the famed Center For Sports Medicine, St. Francis Memorial Hospital. This book is a good mixture of the art and science of that medical practice. The emphasis of the book is on the conservative treatments of injuries of the foot, ankle, and lower leg. Dr Blake emphasizes conservative, and when appropriate, simple approaches to these injuries. He tries hard to establish a healing environment for the patient at the first visit, and then works the patients through all the phases of rehabilitation. This book begins by covering some general topics like what rules not to break, then discusses general rehabilitation principles, general treatments of pain, bio-mechanical approaches to injury, and gait evaluation. He then describes some of the general rules of treatment concerning tendinitis, nerve injuries, and fractures. In the second part of the book, Dr Richard Blake uses many of these general principles and begins to describe top treatments for injuries in the front of the foot, mid part of the foot, heel area, ankle, achilles tendon area, and lower leg not involving the knee or above. Some of the more common injuries described are: Hallux Limitus/Rigidus Bunions Sesamoid Injuries Metatarsalgia Morton's Neuroma Metatarsal Fractures Hammertoes Calluses Blisters Capsulitis or Plantar Plate Tears Gout Toenail Fungus Lisfranc's Sprain Accessory Navicular Ganglion Cysts Plantar Fasciitis Plantar Fascial Tears Calcaneal Stress Fractures Ankle Sprains and Instabilities Posterior or Anterior Tibial Tendinitis Posterior Tibial Tendon Dysfunction Achilles Tendinitis Achilles Ruptures Calf Strain Shin Splints Tennis Leg Compartment Syndromes Tibial or Fibular Stress Fractures Cramps or Deep Vein Thrombosis With 95% of all of the lower extremity pain syndromes and injuries not requiring any form of surgery, a book specializing in a conservative and thoughtful approach to most ailments is very needed. Dr Rich Blake tries to get the patient very involved with their own healing is obvious throughout the book. The emphasis of a conservative approach must require the patient's involvement. This book will help the patient know the subtleties of various treatments like stretching, strengthening, starting to run, looking for a stable shoe, power lacing for stability, which injection to get for a neuroma, why not to use NSAIDs if bone injury is suspected, when support hose are not doing the right job, etc. Through the 35 years that Dr Richard Blake has practiced sports medicine, teaching his patients why certain treatments are used, and what they need to do, is always stressed. His teaching started with patients, but has involved both the national and international worlds of podiatry. He has given over 200 lectures around the world, written 40 plus articles, has a blog and YouTube channel, but his patient's needs and injuries have always come first. He considers his simple approach to most injuries probably boring to some podiatrists, but the patients have truly benefited. The approach that is emphasized in the book is to immediately create a healing environment, gradually get stronger, and gradually return to your previous activities. The book also emphasizes finding the cause or causes of the injury or it may eventually come back. The subtleties of the individual injury can be in the patient's presentation, how they respond to various treatments, and making changes appropriately when the treatment at times stalls.
