Animal Magnetism

When Gail Graham's dog reincarnated, she didn't know what to think. Could such a thing really happen? Was it possible? Or had her awful grief made her a little bit crazy? She'd never heard voices, or seen a ghost. Nothing like this had ever happened to her before. Even so, she found it hard to believe she was crazy. Then she discovered that she was not alone. Hundreds of other people had had the same experience. Dogs reincarnate every day. Because of the length of the human life span, human beings can't usually reincarnate and rejoin their loved ones again in this life. But because dogs' lives are so much shorter, they can -- and do -- reincarnate and return to their beloved owners. What about your dog? Do you want him to come back to you? This amazing, true story tells you how it can happen.

Will Your Dog Reincarnate?

Veterinary Medicine - E-BOOK

Animals are increasingly recognized as fit and proper subjects for historians, yet their place in conventional historical narratives remains contested. This volume argues for a history of animals based on the centrality of liminality - the state of being on the threshold, not quite one thing yet not quite another. Since animals stand between nature and culture, wildness and domestication, the countryside and the city, and tradition and modernity, the concept of liminality has a special resonance for historical animal studies. Assembling an impressive cast of contributors, this volume employs liminality as a lens through which to study the social and cultural history of animals in the modern city. It includes a variety of case studies, such as the horse-human relationship in the towns of New Spain, hunting practices in 17th-century France, the birth of the zoo in Germany and the role of the stray dog in the Victorian city, demonstrating the interrelated nature of animal and human histories. *Animal History in the Modern City* is a vital resource for scholars and students interested in animal studies, urban history and historical geography.

Updating recommendations last made by the National Research Council in the mid-1980s, this report provides nutrient recommendations based on physical activity and stage in life, major factors that influence nutrient needs. It looks at how nutrients are metabolized in the bodies of dogs and cats, indications of nutrient deficiency, and diseases related to poor nutrition. The report provides a valuable resource for industry professionals formulating diets, scientists setting research agendas, government officials developing regulations for pet food labeling, and as a university textbook for dog and cat nutrition. It can also guide pet owners feeding decisions for their pets with information on specific nutrient needs, characteristics of different types of pet foods, and factors to consider when feeding cats and dogs.
