Meaning-Centered Group Psychotherapy for Patients with Advanced Cancer

This book introduces the occupational therapist to the practice of vocational rehabilitation. As rehabilitation specialists, Occupational Therapists work in a range of diverse settings with clients who have a variety of physical, emotional and psychological conditions. Research has proven that there are many positive benefits from working to health and well-being. This book highlights the contribution, which can be made by occupational therapists in assisting disabled, ill or injured workers to access, remain in and return to work.

The Oxford Handbook of Memory

Traumatic brain injury (TBI) syndrome has emerged as a serious health concern worldwide due to the severity of outcomes and growing socioeconomic impacts of the diseases, e.g., high cost of long-term medical care and loss of quality of life. This book focuses on the TBI pathobiology as well as on the recent developments in advanced diagnostics and acute management. The presented topics encompass personal experience and visions of the chapter contributors as well as an extensive analysis of the TBI literature. The book is addressed to a broad audience of readers from students to practicing clinicians.

The Little Book of Restorative Justice

A survey of how spirituality can be incorporated into a range of psychotherapeutic approaches, including psychoanalytic, cognitive-behavioral, humanistic, interpersonal, transpersonal, and others.

Occupational Therapy and Vocational Rehabilitation

For many years, cognitive-behavioral techniques have been at the forefront of treatment for anxiety disorders. More recently, strategies rooted in Eastern concepts of acceptance and mindfulness have demonstrated some promise in treating anxiety, especially in tandem with CBT. Now, with Acceptance-Based Behavioral Therapies for Anxiety, thirty expert clinicians and researchers present a comprehensive guide to integrating these powerful complementary approaches—where they match, when they differ, and why they work so well together. Chapter authors clearly place mindfulness and acceptance into the clinical lexicon, establishing links with established traditions, including emotion theory and experiential therapy. In addition, separate chapters discuss specific anxiety disorders, the current state of treatment for each, and practical ways of integrating acceptance and mindfulness approaches into therapy.

Current Issues in Sports and Exercise Medicine

Frank R. Noyes, MD—internationally-renowned knee surgeon and orthopaedic sports medicine specialist—presents Noyes' Knee Disorders, an unparalleled resource on the diagnosis, management, and outcomes analysis for the full range of complex knee disorders. Master the technical details of procedures such as anterior cruciate ligament reconstruction, meniscus repair, articular cartilage restoration, and many others, and implement appropriate post-operative rehabilitation programs and protocols. Analyze and manage gender disparities in anterior cruciate ligament injuries. You can access the full text, as well as downloadable images, PubMed links, and alerts to new research online at www.expertconsult.com. Offers online access to the full text, downloadable images, PubMed links, and alerts to new research online at expertconsult.com through Expert Consult functionality for convenient reference. Presents step-by-step descriptions on the full range of complex soft tissue knee operative procedures for the anterior cruciate ligament reconstruction, meniscus repair, soft tissue transplants, osseous malalignments, articular cartilage restoration, posterior cruciate ligament reconstruction, and more to provide you with guidance for the management of any patient. Relies on Dr. Noyes' meticulous published clinical studies and outcomes data from other peer-reviewed publications as a scientifically valid foundation for patient care. Features detailed post-operative rehabilitation programs and protocols so that you can apply proven techniques and ease your patients' progression from one phase to the next. Bonus video available only from the website provides live presentations from the 2009 Advances on the Knee and Shoulder course, step-by-step surgical demonstration of an opening wedge tibial osteotomy, and a 4-part series on the Diagnosis of Knee Ligament Injuries.

Continuing Bonds

Noyes' Knee Disorders: Surgery, Rehabilitation, Clinical Outcomes E-Book

Since the Korean War the forgotten war more than a million Korean women have acted as sex workers for U.S. servicemen. More than 100,000 women married GIs and moved to the United States. Through intellectual vigor and personal recollection, *Haunting the Korean Diaspora* explores the repressed history of emotional and physical violence between the United States and Korea and the unexamined reverberations of sexual relationships between Korean women and American soldiers.

Generating Middle Range Theory

To be unforgiving is harmful. The inability to come to terms with one's anger or strife often can lead to stress disorders, mental health disorders, and relationship problems. *Forgiveness and Reconciliation* focuses on individual experiences with forgiveness, aiming to create a theory of what forgiveness is and connect it to a clinical theory of how to promote forgiveness. Dr. Worthington creates an evidence-based approach that is applicable for individuals and relationships, and even for society. He also describes an evidence-based method of reconciliation - restoring trust in damaged relationships. Dr. Worthington hopes that this theory will inform scientific research and improve intervention strategies. Showing that forgiveness transforms personality, Worthington describes ways a clinician can promote (but not force) forgiveness of others and self. He provides research-based theory and applications and discusses the role of emotion and specific personality traits as related to forgiveness. *Forgiveness and reconciliation* might not be cures, but, as Worthington shows, they are tools for transforming both the self and the world.

Terror and the Sublime in Art and Critical Theory

The culmination of more than 25 years of clinical work and research, this is the authoritative presentation of cognitive processing therapy (CPT) for posttraumatic stress disorder (PTSD). Written by the treatment's developers, the book includes session-by-session guidelines for implementation, complete with extensive sample dialogues and 40 reproducible client handouts. It explains the theoretical and empirical underpinnings of CPT and discusses how to adapt the approach for specific populations, such as combat veterans, sexual assault survivors, and culturally diverse clients. The large-size format facilitates photocopying and day-to-day use. Purchasers also get access to a Web page where they can download and print the reproducible materials. CPT is endorsed by the U.S. Departments of Veterans Affairs and Defense, the International Society of Traumatic Stress Studies, and the U.K. National Institute for Health and Care Excellence (NICE) as a best practice for the treatment of PTSD.

Traumatic Brain Injury

Howard Zehr is the father of Restorative Justice and is known worldwide for his pioneering work in transforming understandings of justice. Here he proposes

workable principles and practices for making Restorative Justice possible in this revised and updated edition of his bestselling, seminal book on the movement. (The original edition has sold more than 110,000 copies.) Restorative Justice, with its emphasis on identifying the justice needs of everyone involved in a crime, is a worldwide movement of growing influence that is helping victims and communities heal, while holding criminals accountable for their actions. This is not soft-on-crime, feel-good philosophy, but rather a concrete effort to bring justice and healing to everyone involved in a crime. In *The Little Book of Restorative Justice*, Zehr first explores how restorative justice is different from criminal justice. Then, before letting those appealing observations drift out of reach into theoretical space, Zehr presents Restorative Justice practices. Zehr undertakes a massive and complex subject and puts it in graspable form, without reducing or trivializing it. This resource is also suitable for academic classes and workshops, for conferences and trainings, as well as for the layperson interested in understanding this innovative and influential movement.

The Anterior Cruciate Ligament: Reconstruction and Basic Science E-Book

In the 16th century, the beginning of African enslavement in the Americas until the ratification of the Thirteenth Amendment and emancipation in 1865, Africans were hunted like animals, captured, sold, tortured, and raped. They experienced the worst kind of physical, emotional, psychological, and spiritual abuse. Given such history, isn't it likely that many of the enslaved were severely traumatized? And did the trauma and the effects of such horrific abuse end with the abolition of slavery? Emancipation was followed by one hundred more years of institutionalized subjugation through the enactment of Black Codes and Jim Crow laws, peonage, convict leasing, domestic terrorism and lynching. Today the violations continue, and when combined with the crimes of the past, they result in yet unmeasured injury. What do repeated traumas, endured generation after generation by a people produce? What impact have these ordeals had on African Americans today? Dr. Joy DeGruy, answers these questions and more. With over thirty years of practical experience as a professional in the mental health field, Dr. DeGruy encourages African Americans to view their attitudes, assumptions, and behaviors through the lens of history and so gain a greater understanding of how centuries of slavery and oppression have impacted people of African descent in America. *Post Traumatic Slave Syndrome* helps to lay the necessary foundation to ensure the well-being and sustained health of future generations and provides a rare glimpse into the evolution of society's beliefs, feelings, attitudes and behavior concerning race in America.

Navigating Life Transitions for Meaning

The strengths and weaknesses of human memory have fascinated people for hundreds of years, so it is not surprising that memory research has remained one of the most flourishing areas in science. During the last decade, however, a genuine science of memory has emerged, resulting in research and theories that are rich, complex, and far reaching in their implications. Endel Tulving and Fergus Craik, both leaders in memory research, have created this highly accessible guide

to their field. In each chapter, eminent researchers provide insights into their particular areas of expertise in memory research. Together, the chapters in this handbook lay out the theories and presents the evidence on which they are based, highlights the important new discoveries, and defines their consequences for professionals and students in psychology, neuroscience, clinical medicine, law, and engineering.

Strengthening Forensic Science in the United States

Repressive regimes, regardless of their nature and geographic location, have a destructive and dehumanizing effect on people's lives. Oppression and political violence shatter victims' identities, their relationships, communities and the meaning of their world as a safe and coherent place. However, while some people suffer traumatising long term effects, others become stronger and more resilient, able to rebuild their lives in the aftermath of tragedy. Reconstructing Trauma and Meaning is an invitation to revisit, bear witness and listen to the stories of suffering and healing of survivors of apartheid repression in South Africa. This work is an exploration of the life trajectories of former victims of gross human rights violations during apartheid and their creative ways of reconstructing meaning after trauma. Their life narratives, shaped by social, political and cultural realities, are a valuable contribution to the collective memory of the nation, as an intrinsic part of the continuous process of reconciliation and transformation in South Africa.

Moses and Monotheism

To serve the increasing numbers of individuals who have survived interpersonal and domestic violence, or as refugees, have sought asylum from political violence, armed conflict, or torture, Transforming the Legacy presents an innovative relationship-based and culturally informed couple therapy practice model that is grounded in a synthesis of psychological and social theories. This unique couple therapy model encompasses three phases of clinical practice: Phase I entails a process of establishing safety, stabilization, and a context for changing legacies of emotional, sexual, and/or physical abuse. Phase II guides reflection on the trauma narrative. The goal of phase III is to consolidate new perspectives, attitudes, and behaviors. Within these phases, the model—illustrated with rich case studies—focuses on specific issues, including: intersubjectivity between the client and clinician (such as transference and countertransference, vicarious traumatization, and racial identity development); intrapersonal, interactional, and institutional factors; the role of the "victim-victimizer-bystander" dynamic in the couple and therapeutic relationships; preserving a locus of control with clients; flexibility in decisionmaking regarding clinical processes; and specific practice themes, such as the composition of a couple, the role of violence, parenting, sexuality, affairs, dual diagnoses, and dissociation. A dramatic departure from formulaic therapeutic approaches, this biopsychosocial model emphasizes the crafting of specific treatment plans and specific clinical interventions to show how couple therapy can transform the legacies of childhood traumatic events for a wide range of populations, including military couples and families, gay lesbian/bisexual/transgendered couples and families, and immigrant and refugee couples and families. This thorough attention to issues of cultural diversity distinguish Transforming the Legacy from the current literature and make it an

invaluable resource for clinicians in a wide range of professional disciplines.

Reconstructing Trauma and Meaning

The book consists of three essays and is an extension of Freud's work on psychoanalytic theory as a means of generating hypotheses about historical events. Freud hypothesizes that Moses was not Hebrew, but actually born into Ancient Egyptian nobility and was probably a follower of Akhenaten, an ancient Egyptian monotheist. Freud contradicts the biblical story of Moses with his own retelling of events, claiming that Moses only led his close followers into freedom during an unstable period in Egyptian history after Akhenaten (ca. 1350 BCE) and that they subsequently killed Moses in rebellion and later combined with another monotheistic tribe in Midian based on a volcanic God, Jahweh. Freud explains that years after the murder of Moses, the rebels regretted their action, thus forming the concept of the Messiah as a hope for the return of Moses as the Saviour of the Israelites. Freud said that the guilt from the murder of Moses is inherited through the generations; this guilt then drives the Jews to religion to make them feel better.

The Book of Daniel

This unique resource presents current issues in sports and exercise medicine which outlines new areas of knowledge and provides updates on current knowledge in the broad field of sports and exercise medicine. Written by experts in their own sub-disciplines, *Current Issues in Sports and Exercise Medicine* discusses the physiology behind sports injuries and presents new and exciting approaches to manage such injuries. In addition, the book explores the relationship between exercise, health and performance by providing new information in areas such as exercise and immunity, the use of iron supplementation for performance, how exercise affects reactive oxygen species, and the proposed benefits of real and simulated altitude training. This book is well referenced and illustrated and will be a valuable resource for sports medicine specialists, physiologists, coaches, physical conditioners, physiotherapists and graduate and medical school students.

Contemporary Literary and Cultural Theory

Although trauma victims constitute around one-tenth to one-eighth of the total patient volume in hospital emergency departments, the burden of trauma on humankind is beyond these statistics. The twenty-first century is witnessing a growing threat on human beings imposed by many sources, namely natural disasters, terrorism and other conflicts, warfare, and transportation accidents; all of which ignite the rise of major trauma incidents worldwide. Physicians, therefore, get involved in trauma management more and more frequently in time. They need to evaluate, diagnose, treat, and stabilize victims and help them take part in active and productive life as soon as possible. Technological advances have provided many techniques to augment trauma care and resuscitation, fracture healing, wound care, casts and splints, sutures, and transfusions. However, the successful management of trauma warrants a collaboration of emergency medicine, surgical disciplines, intensive care medicine, and almost all the resources of a hospital. This work is an example of a multidisciplinary approach that is a must to maximize

synergistic efforts to deliver contemporary care for trauma victims of all ages throughout the world.

Spiritually Oriented Psychotherapy

Promoting Positive Processes after Trauma merges research and clinical applications pertaining to the common experiences of trauma among clients with many different presentations and diagnoses. The book examines positive processes as they operate within trauma and considers the intentional development by the clinician of these positive processes with individual clients. The book is structured after the cornerstone tenets of positive psychology resilience, hope, forgiveness, post-traumatic growth and benefit-finding, meaning making and spirituality. Covers positive psychology processes, such as growing out of developmental trajectories; cognitive, emotional and intra-personal processes; interpersonal processes; and community- and contextually-defined processes. Integrates positive psychology with trauma treatment Utilizes case vignettes to introduce concepts Includes questions for further discussion in each chapter Selects processes that can be influenced through a range of treatments and treatment components Provides seminal references for each topic and processes to facilitate further reading by the clinician

Some Problems of Reconstruction

Master the very latest clinical and technical information on the full range of anterior cruciate ligament reconstruction techniques. Both inside the remarkably user-friendly printed version of this Expert Consult title and on its fully searchable web site, you'll find detailed coverage of hamstring, allograft and bone-tendon-bone (BTB) ACL reconstruction (including single versus double bundle techniques), and hamstring graft harvesting; plus fixation devices, rehabilitation, revision ACLR surgery, and much more! A "dream team" of ACL surgeons provides the advanced guidance you need to overcome the toughest challenges in this area. A comparison of the full range of graft options for ACL reconstruction makes it easier to choose the best approach for each patient. State-of-the-art information on the latest principles and technical considerations helps you avoid complications. 'How to' principles of post-op rehabilitation and revision ACL surgery optimize patient outcome. Access to the full contents of the book online enables you to consult it from any computer and perform rapid searches. Also available in an upgradeable premium online version including fully searchable text PLUS timely updates.

Reconstructing Meaning After Trauma

The assumptive world concept is a psychological principle of the conservation of human reality or "culture" - it is a lens for seeing the psychological disturbances that occur in times of change. In this collection, the authors examine the assumptive world from diverse theoretical perspectives, providing the reader with an array of different viewpoints illuminating the concept and its clinical usefulness.

Trauma Surgery

Posttraumatic Stress Disorder

Transforming the Legacy

Can we remember other people's memories? The Generation of Postmemory argues we can: that memories of traumatic events live on to mark the lives of those who were not there to experience them. Children of survivors and their contemporaries inherit catastrophic histories not through direct recollection but through haunting postmemories--multiply mediated images, objects, stories, behaviors, and affects passed down within the family and the culture at large. In these new and revised critical readings of the literary and visual legacies of the Holocaust and other, related sites of memory, Marianne Hirsch builds on her influential concept of postmemory. The book's chapters, two of which were written collaboratively with the historian Leo Spitzer, engage the work of postgeneration artists and writers such as Art Spiegelman, W.G. Sebald, Eva Hoffman, Tatana Kellner, Muriel Hasbun, Anne Karpff, Lily Brett, Lorie Novak, David Levinthal, Nancy Spero and Susan Meiselas. Grappling with the ethics of empathy and identification, these artists attempt to forge a creative postmemorial aesthetic that reanimates the past without appropriating it. In her analyses of their fractured texts, Hirsch locates the roots of the familial and affiliative practices of postmemory in feminism and other movements for social change. Using feminist critical strategies to connect past and present, words and images, and memory and gender, she brings the entangled strands of disparate traumatic histories into more intimate contact. With more than fifty illustrations, her text enables a multifaceted encounter with foundational and cutting edge theories in memory, trauma, gender, and visual culture, eliciting a new understanding of history and our place in it.

Trauma and Transformation

That personal growth often occurs in people who have experienced traumatic events is an acknowledged but under-researched phenomenon. This book fills the gap: the authors use a cognitive framework to explore this finding, focusing upon changes in belief systems reported by trauma survivors. Tedeschi and Calhoun weave together literature from fields as diverse as philosophy, religion and psychology, and incorporate major research findings into the effect of trauma. With case examples from the authors' research and clinical work, information is presented in a manner accessible to clinicians. In addition, one chapter is written specifically for trauma survivors.

Management of Dead Bodies in Disaster Situations

In 1967, Daniel, the son of two convicted spys executed by their own country, ponders his life, his sister's radicalism, his appreciation for his wife and son, and the hypocrisy of the moralistic ideals upon which this country was based. Reader's Guide included. Reprint.

The Generation of Postmemory

This manual will ensure that the management of massive fatalities forms part of disaster preparedness and response plans, and that it is a fundamental aspect of humanitarian assistance to survivors and rehabilitation and reconstruction programs. The manual provides the technical information that will support the correct approach to handling dead bodies. Contents: Preparedness for mass deaths; Medicolegal work in major disasters; Health considerations in cases of mass fatalities; Sociocultural aspects; Psychological aspects; Legal aspects; Cases studies; Final recommendations; Myths and realities of management of dead bodies in disasters; and Glossary. Illustrations.

Haunting the Korean Diaspora

Social and personality psychologists traditionally have focused their attention on the most basic building blocks of human thought and behavior, while existential psychologists pursued broader, more abstract questions regarding the nature of existence and the meaning of life. This volume bridges this longstanding divide by demonstrating how rigorous experimental methods can be applied to understanding key existential concerns, including death, uncertainty, identity, meaning, morality, isolation, determinism, and freedom. Bringing together leading scholars and investigators, the Handbook presents the influential theories and research findings that collectively are helping to define the emerging field of experimental existential psychology.

Trauma and Recovery

Reconstructing Meaning After Trauma: Theory, Research, and Practice informs actual therapeutic work with clients who present with traumas or other life disruptions by providing clinicians with information on the construction of meaning. It includes material on diverse mechanisms of clinical change and positive-promoting processes. The book covers identifiable treatments and specific lines of research in assisting clients in developing new meaning, such as posttraumatic growth (after sexual assault, diagnosis, and treatment of cancer, destructive natural phenomena, such as hurricanes, and refugee experiences), and finding benefit (in the context of loss—loss of health, or loss of a loved one). Addresses a specific treatment or line of research Includes extended case vignettes at the beginning of each chapter Describes the associated theoretical background for each method Summarizes the research supporting each mechanism Concludes with a discussion of future directions for treatment, research, and theory

Treating Traumatic Bereavement

Exam Prep for: Reconstructing Meaning After Trauma

Loss of the Assumptive World

First published in 1996. Routledge is an imprint of Taylor & Francis, an informa company.

Forgiveness and Reconciliation

The eleven interconnected essays of this book penetrate the dense historical knots binding terror, power and the aesthetic sublime and bring the results to bear on the trauma of September 11 and the subsequent War on Terror. Through rigorous critical studies of major works of post-1945 and contemporary culture, the book traces transformations in art and critical theory in the aftermath of Auschwitz and Hiroshima. Critically engaging with the work of continental philosophers, Theodor W. Adorno, Jacques Derrida, and Jean-Francois Lyotard and of contemporary artists Joseph Beuys, Damien Hirst, and Boaz Arad, the book confronts the shared cultural conditions that made Auschwitz and Hiroshima possible and offers searching meditations on the structure and meaning of the traumatic historical 'event'. Ray argues that globalization cannot be separated from the collective tasks of working through historical genocide. He provocatively concludes that the current US-led War on Terror must be grasped as a globalized inability to mourn.

Acceptance- and Mindfulness-Based Approaches to Anxiety

The importance of spiritual well-being and the role of "meaning" in moderating depression, hopelessness and desire for death in terminally-ill cancer and AIDS patients has been well-supported by research, and has led many palliative clinicians to look beyond the role of antidepressant treatment in this population. Clinicians are focusing on the development of non-pharmacologic interventions that can address issues such as hopelessness, loss of meaning, and spiritual well-being in patients with advanced cancer at the end of life. This effort led to an exploration and analysis of the work of Viktor Frankl and his concepts of logotherapy, or meaning-based psychotherapy. While Frankl's logotherapy was not designed for the treatment of patients with life-threatening illnesses, his concepts of meaning and spirituality have inspired applications in psychotherapeutic work with advanced cancer patients, many of whom seek guidance and help in dealing with issues of sustaining meaning, hope, and understanding cancer and impending death in the context of their lives. Individual Meaning-Centered Group Psychotherapy (IMCP), an intervention developed and rigorously tested by the Department of Psychiatry & Behavioral Sciences at Memorial Sloan-Kettering Cancer Center, is a seven-week program that utilizes a mixture of didactics, discussion and experiential exercises that focus around particular themes related to meaning and advanced cancer. Patients are assigned readings and homework that are specific to each session's theme and which are utilized in each session. While the focus of each session is on issues of meaning and purpose in life in the face of advanced cancer and a limited prognosis, elements of support and expression of emotion are inevitable in the context of each group session. The structured intervention presented in this manual can be provided by a wide array of clinical disciplines, ranging from chaplains, nurses, palliative care physicians, to counselors, psychotherapists, social workers, graduate psychology students, psychologists and psychiatrists.

Handbook of Experimental Existential Psychology

A prominent theme presented in this volume is that symptoms in the bereaved

individual have meaning-making significance and that meaning reconstruction in response to loss is the central process in grieving. More scientifically oriented readers will find comprehensive discussions of research programs supporting these tenets, particularly those linking grief with responses to loss involved in trauma. Practitioners will find clinically informed models and ample case descriptions to bridge concepts with real people suffering real loss. All will find new paradigms for approaching loss and reconstruction of meaning in a respectful, revealing way that has significance both personally and professionally. (PsycINFO Database Record (c) 2004 APA, all rights reserved).

Post Traumatic Slave Syndrome

"As expected, this book is complex but it is also engaging, thought-provoking, and exciting because it helps nurses and other readers think deeply about meeting the needs of patients at their most vulnerable moments. Score: 94, 4 Stars--Doody's Medical Reviews Callista Roy, one of nursing's leading theorists and creator of the widely used Roy Adaptation Model of Nursing, presents a unique pathway for developing knowledge for nursing practice. Her book distills the most relevant information from 200 published research studies to provide a roadmap for progressing from nursing research to middle-range theory to optimum practice regimens. It is based on tested knowledge, clear evidence, and refined caring perspectives. Step by step, the text identifies and critiques research suited for developing cumulative knowledge for practice and uses the research to develop middle-range theories that apply across all health care settings. It then presents the evidence for practice for each middle range theory, refocuses EBP within nursing knowledge and within defined levels of readiness for practice, and recommends changes for practice based on evidence. Grounded in the Roy Adaptation Model of Nursing, the book provides a single conceptual basis for synthesis of research into middle range theories for use across all patient populations. It clarifies ways to select research from one conceptual basis to build middle-range theories, how to classify evidence for practice by levels of readiness, and recommend research-based changes in practice. The text includes quantitative and qualitative research designs and offers instruments to measure major concepts for implementation. Also included are plentiful examples, tables that display values across studies, definitions of major terms and concepts, and diagrams of concepts. Supplementing the text is a faculty guide for using the text to teach critical thinking at multiple graduate levels and videos illuminating each section of the book. Key Features: Explains clearly how middle-range theories grow from research Designed for implementation in practice Uses Roy's five core adaptation contexts as organizing themes: coping, changing life events, loss, chronic health condition, and traumatic events Constitutes a seminal work from a pre-eminent nursing theorist and educator Includes faculty guide and videos elucidating each section of the book

Cognitive Processing Therapy for PTSD

This book presents an integrated treatment approach for those struggling to adapt after the sudden, traumatic death of a loved one. The authors weave together evidence-based clinical strategies grounded in cutting-edge knowledge about both trauma and grief. The book offers a clear framework and many practical tools for

building survivors' psychological and interpersonal resources, processing their trauma, and facilitating mourning. In a large-size format with lay-flat binding for easy photocopying, the book includes over 30 reproducible handouts. Purchasers can access a companion website to download and print these materials as well as supplemental handouts and a sample 25-session treatment plan. Winner (Second Place)--American Journal of Nursing Book of the Year Award, Psychiatric and Mental Health Nursing Category

Meaning Reconstruction & the Experience of Loss

Navigating Life Transitions for Meaning explores the central human motivation of meaning making, and its counterpart, meaning disruption. The book describes different types of specific transitions, details how specific transitions affect an individual differently, and provides appropriate clinical approaches. The book examines the effects of life transitions on the component parts of meaning in life, including making sense (coherence), driving life goals (purpose), significance (mattering), and continuity. The book covers a range of transitions, including developmental (e.g., adolescence to adulthood), personal (e.g., illness onset, becoming a parent, and bereavement), and career (e.g., military deployment, downshifting, and retiring). Life transitions are experienced by all persons, and the influence of those transitions are tremendous. It is essential for clinicians to understand how transitions can disrupt life and how to help clients successfully navigate these changes. Covers cultural transitions, such as immigration and religious conversion Examines health transitions, such as cancer survivorship and acquired disability Uses a positive psychology framework to understand transitions Includes bulleted 'take-away' summaries of key points in each chapter Provides clinical applications of theory to practice

The Theory of Moral Sentiments

Contemporary Literary and Cultural Theory: The Johns Hopkins Guide is a clear, accessible, and detailed overview of the most important thinkers and topics in the field. Written by specialists from across disciplines, its entries cover contemporary theory from Adorno to Žižek, providing an informative and reliable introduction to a vast, challenging area of inquiry. Materials include newly commissioned articles along with essays drawn from The Johns Hopkins Guide to Literary Theory and Criticism, known as the definitive resource for students and scholars of literary theory and for philosophical reflection on literature and culture.

Promoting Positive Processes after Trauma

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the

National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

A Multidimensional Approach to Post-Traumatic Stress Disorder

This authored text-reference will be the first comprehensive text in the rapidly growing field of psychological trauma and posttraumatic stress disorder. According to the NIMH, approximately 5.2 million American adults already suffer from post traumatic stress disorder. Caused by everything from combat experience to violent personal assaults to natural disasters and accidents, the incidence of PTSD has already reached epidemic proportions. The profound impact of psychological trauma and the need for proactive and scientifically-based approaches to timely prevention and evidence based treatment is unarguable and mental health programs are seeing a significant rise in the number of PTSD courses offered and services required. As a result, scholars, researchers, educators, clinicians, and trainees in the health care and human and social services need a concise and comprehensive source of authoritative information on psychological trauma and posttraumatic stress. This volume will offer a foundational understanding of the field as well cover key controversies, the influence of culture and gender, and describe state-of-the-art research and clinical methodologies in down-to-earth terms. Clinical case studies will be used liberally. * Concise but comprehensive coverage of biological, clinical and social issues surrounding PTSD * Thoroughly covers evidence-based treatments, enabling the reader to translate current research into effective practice * Exemplifies practical application through case studies
