SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs

that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those

who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe

the discoveries, the tragedies, the undersea explorations, as well as instructor organizations, diving achievers, and a number of important events which together comprise the history of underwater diving in Australia. Within the pages of this book is a large section dealing with the Chronicle of Sport Diving, events reported as though they had recently happened, recapturing all the important occurrences that took place during 80 years since Alex Wickham first speared fish in Sydney Harbour. Special features include newspaper reports of early spearfishing, the establishment of the first spearfishing association in 1948 and the appearance of the first home-made scuba regulator. There are thrilling and sometimes tragic stories of shark attacks. A woman skin diver was lost at sea for nearly three days and nights, and survived. There is the story of Australia's first and so far only world champion spearfisherman and that of two scuba divers who swam with a white pointer shark for half an hour in open water, yet were not attacked by the beast, the devastating deaths of four scuba divers in a sinkhole at Mt. Gambier, the rapid advance of underwater technology in Australia and much more. This is the only book of its kind dealing with the history of spearfishing and scuba diving in this country. For some, it will bring back old memories, for others a readable and authoritative history of spearfishing and scuba diving in Australia. For every diver, man or woman, it cannot fail to stir emotions as it recaptures exciting and historical events. At the end of the Second World War, a Frenchman, Michel Calluauud brought plans of the Gagnan-Cousteau regulator to Australia and he built one of the first in the world here. Australians could

As we push beyond the boundary of seashores and venture further under water we begin to discover many things that were once beyond our grasp and it is the aqualung that has enabled us to journey beyond the confinements of land. THE HISTORY OF SPEARFISHING AND SCUBA DIVING IN AUSTRALIA not only deals with the scuba diving, but also, as the title suggests, with a wealth of information concerning spearfishing and related underwater activities.

challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance. Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first book, it is highly recommended that you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that are highly beneficial.
