The World of Peptides

N.E.A. Bulletin

The volume contains 23 papers read at the international conference "Historical Corpora 2012", which was hosted by the LOEWE Research Cluster "Digital Humanities" of the State of Hesse at the University of Frankfurt on December 6-8, 2012. The papers, which include three keynote speeches, have been duly updated for the present volume. The contributions take a broad variety of perspectives on "historical corpora", including their structuring, their management, and various other facets. In addition to this, they cover a large amount of different languages, extending from German - in nearly all its

historical facettes - across the Romance languages into the Caucasus and from the recent past down into antiquity. Differences also concern the linguistic interests prevailing in the papers, which may focus on syntactic, semantic, pragmatic, lexicological or other phenomena.

The American Catalogue

The siege of Yorktown in the fall of 1781 was the single most decisive engagement of the American Revolution. The campaign has all the drama any historian or student could want: the war's top generals and admirals pitted against one another; decisive naval engagements; cavalry fighting; siege warfare; night bayonet attacks; and much more. Until now, however, no modern scholarly treatment of the entire campaign has been produced. By the summer of 1781, America had been at war with England for six years. No one believed in 1775 that the colonists would put up such a long and credible struggle. France sided with the colonies as early as 1778, but it was the dispatch of 5,500 infantry under Comte de Rochambeau in the summer of 1780 that shifted the tide of war against the British. In early 1781, after his victories in the Southern Colonies, Lord Cornwallis

marched his army north into Virginia. Cornwallis believed the Americans could be decisively defeated in Virginia and the war brought to an end. George Washington believed Cornwallis's move was a strategic blunder, and he moved vigorously to exploit it. Feinting against General Clinton and the British stronghold of New York, Washington marched his army quickly south. With the assistance of Rochambeau's infantry and a key French naval victory at the Battle off the Capes in September, Washington trapped Cornwallis on the tip of a narrow Virginia peninsula at a place called Yorktown. And so it began. Operating on the belief that Clinton was about to arrive with reinforcements, Cornwallis confidently remained within Yorktown's inadequate defenses. Determined that nothing short of outright surrender would suffice, his opponent labored day and night to achieve that end. Washington's brilliance was on display as he skillfully constricted Cornwallis's position by digging entrenchments, erecting redoubts and artillery batteries, and launching well-timed attacks to capture key enemy positions. The nearly flawless Allied campaign sealed Cornwallis's fate. Trapped inside crumbling defenses, he surrendered on October 19, 1781, effectively ending the war in North America. Penned by historian Jerome A. Greene, *The Guns of Independence: The Siege of Yorktown, 1781* offers a complete and balanced examination of the siege and the participants involved. Greene's study is based upon extensive archival research and firsthand archaeological investigation of the battlefield. This fresh and invigorating study will satisfy everyone interested in American Revolutionary history, artillery, siege tactics, and brilliant leadership. About the

Author: Jerome A. Greene is a historian with the National Park Service. He is the author or editor of many books, including *Morning Star Dawn: The Powder River Expedition and the Northern Cheyenne, 1876*, and his most recent effort, *Washita: The U.S. Army and the Southern Cheyennes, 1867-1869*. He lives in Colorado.

Historical Acoustics

Historical Corpora

Library Literature

This book is a collection of contributions to the Special Issue “Historical Acoustics: Relationships between People and Sound over Time”. The research presented here aims to explore the origins of acoustics and examine the relationships that have evolved over the centuries between people and auditory phenomena. Sounds have indeed accompanied human civilizations since the beginning of time, helping them to make sense of the world and to shape their cultures. Several key topics emerged, such as the acoustics of historical worship buildings, the acoustics of sites of archaeological interest, the acoustics of historical opera houses, and the topic of soundscapes as cultural intangible heritage. The book, as a whole, reflects the vibrant research activity around the “acoustics of the past”, which will hopefully be serve as a foundation for inspiring the future path of this discipline.

This book discusses how fact-finding mechanisms for alleged violations of international human rights, humanitarian and criminal law can be improved. There has been a significant increase in the use of international, internationalised and domestic fact-finding mechanisms since 1992, including by the United Nations human rights system, international commissions of inquiry, truth and reconciliation commissions, and NGOs. They are analysed and assessed in detail by 19 authors under the common theme 'Quality Control in Fact-Finding'. The authors include Richard J. Goldstone, Martin Scheinin, LIU Daqun, Charles Garraway, David Re, Simon De Smet, FAN Yuwen, Isabelle Lassée, WU Xiaodan, Dan Saxon, Chris Mahony, Dov Jacobs, Catherine Harwood, Lyal S. Sunga, Wolfgang Kaleck, Carolijn Terwindt, Ilia

Utmelidze and Marina Aksenova. Serge Brammertz has written the Preface, and LING Yan a Foreword. The book emphasises quality awareness and improvement in non-criminal justice fact-work. This quality control approach recognises, inter alia, the importance of leadership in fact-finding mechanisms, the responsibility of individual fact-finders to continuously professionalise, and the need for fact-finders to be mandate-centred. It is an approach that invites the consideration of how the quality of every functional aspect of fact-finding can be improved, including work processes to identify, locate, obtain, verify, analyse, corroborate, summarise, synthesise, structure, organise, present, and disseminate facts. The book also considers regulatory approaches to enhance quality and professionalisation.

Ten Strategies of a World-Class Cyber Security Operations Center conveys MITRE's accumulated expertise on enterprise-grade computer network defense. It covers ten key qualities of leading Cyber Security Operations Centers (CSOCs), ranging from their structure and organization, to processes that

best enable smooth operations, to approaches that extract maximum value from key CSOC technology investments. This book offers perspective and context for key decision points in structuring a CSOC, such as what capabilities to offer, how to architect large-scale data collection and analysis, and how to prepare the CSOC team for agile, threat-based response. If you manage, work in, or are standing up a CSOC, this book is for you. It is also available on MITRE's website, www.mitre.org.

Proceedings

This is a print on demand edition of a hard to find publication. Contents: (1) Introduction; (2) Background: Proposed 313-Ship Fleet; FY 2010 Shipbuilding Request; (3) Oversight Issues for Congress: Adequacy of Proposed 313-Ship Fleet: Adequacy of Shipbuilding Plan for Maintaining 313 Ships; Shortfalls Relative to 313-Ship Goals; Affordability of Shipbuilding Plan; (4) Legislative Activity for FY 2010: FY 2010 Defense Authorization Act; FY 2010 DoD Appropriations Act; Resolution

Directing Submission of FY 2010 30-Year Shipbuilding Plan; Legislation on Individual Shipbuilding Programs. Appendixes: (A) December 2009 Press Reports About Draft FY 2011 30-Year Shipbuilding Plan; (B) Adequacy of Planned 313-Ship Fleet; (C) Size of the Navy and Navy Shipbuilding Rate. Charts and tables.

Antitrust Division Grand Jury Practice Manual

English Mechanic and World of Science

Almost two centuries ago proteins were recognized as the primary materials (proteios = primary) of life, but the significance and wide role of peptides (from pepsis = digestion) in practically all life processes has only become apparent in the last few decades. Biologically active peptides are now being discovered at rapid intervals in the brain and in other organs including the heart, in the skin of amphibians and many other tissues. Peptides and peptide-like

compounds are found among toxins and antibiotics. It is unlikely that this process, an almost explosive broadening of the field, will come to a sudden halt. By now it is obvious that Nature has used the combination of a small to moderate number of amino acids to generate a great variety of agonists with specific and often highly sophisticated functions. Thus, peptide chemistry must be regarded as a discipline in its own right, a major branch of biochemistry, fairly separate from the chemistry of proteins. Because of the important role played by synthesis both in the study and in the practical preparation of peptides, their area can be considered as belonging to bio-organic chemistry as well. The already overwhelming and still increasing body of knowledge renders an account of the history of peptide chemistry more and more difficult. It appears therefore timely to look back, to take stock and to recall the important stages in the development of a new discipline.
