The University of Toronto's Faculty of Medicine is North America's largest medical school and a major health consortium, boasting nine affiliated teaching hospitals and a network of research institutes. It is where insulin was pioneered, stem cells were first discovered, and famous physicians from Vincent Lam to Sheela Basrur began their careers. But despite all its major accomplishments, the faculty's impressive history has never before been comprehensively documented. In Partnership for Excellence, senior medical historian and award-winning author Edward Shorter details the Faculty of Medicine's history from its inception as a small provincial school to its present day status as an international powerhouse. Deeply researched through front-line interviews and primary sources, it ties the story of the faculty and its teaching hospitals to the general history of medicine over this period. Shorter emphasizes the enormous concentration of intellectual energy in the faculty that has allowed it to become the dominant force in Canadian medicine, home to a legion of medical pioneers and achievements.

End of Copycat China helps business executives and investors understand how China's economy is shifting from one based on heavy investment to one on services and consumption by providing insight that help shape effective strategy. Drawing from over 50,000 interviews with entrepreneurs, venture capitalists, private equity investors, private Chinese companies, and multinationals, this book describes how Chinese firms are increasingly focused on innovation rather than copying what worked in America and how consumers are evolving with their hopes, dreams and aspirations. China's growth model of the last three decades is becoming increasingly ineffective, as relying on heavy investment and exports is becoming less and less feasible. Fifty percent of China's growth in 2013 stemmed from consumption, the government is establishing a Free Trade zone in Shanghai and ending the dominance of state-owned enterprises. This book provides a roadmap for companies and investors looking to navigate these changes and capture emerging trends, with deep insight and practical guidance on what innovation looks like in the new China. Survey the development of innovation taking place in China's economy, from an insider's perspective Consider the changes that must take place to shore up the broken growth model Examine the consumer trends emerging in the midst of rapid market evolution Understand how China's rise will impact its neighbors like Japan, Vietnam, Indonesia, and Cambodia China's dramatic shift toward consumption presents a tremendous opportunity for foreign business, but traditional tactics are outdated at best, financially fatal at worst, as local competitors focus on innovation and move up the value chain and

as consumers look for new brands and categories to spend money on. New strategies are needed to keep pace with the changing regulatory and consumer environments, and "business as usual" won't get very far. The End of Copycat China is the business guide to this emerging market, with expert guidance from the inside.

End-of-Life Matters

This book is based on the author's knowledge and experiences. What she had with God in herself and others. It is about changing your life. As you can heal yourself through prayers and having a positive attitude and to laugh more to show the world you can do it for yourself. You are the one that count. "heal yourself with forgiveness, see people with the spiritual eye not the physical eye". Don't role yourself at anyone's level as you reflect your friends and they reflect you. If you can't change your life, you will take it with you. Stay on a spiritual path four keys and love into yourself. Win the grace of your mind, keep it calm and serene. Have more grace than space. Fill yourself with peace and love. If you have a strength within you, nurture your creativity into expression. Know you outfield with inspiration, and can express it best in creative ways. Don't worship your problem. Having a fix mind you will always have problem. Wrap your problem in a bundle and give them to God. Fill yourself with good, gratitude, joy feels warmth and good thought. There is no space left for anger and fear, criticism, or illnesses. Know the truth, and the truth will set you free.

There are 2,600 hospitals in Asia, Africa and South America which could be

classified as "Mission Hospitals" - far off the beaten path, providing basic medical service to the poorest people of the world. The Hospital at the End of the World tells the story of a nurse from the USA and his first experience as a teaching nurse in Nepal. Joe Niemczura brings to life the day-to-day realities of life in a rural teaching hospital, literally at the "end of the road." The harsh realities of a lack of modern medical equipment when mixed with the humanness of endurances demonstrates that above all, it is the individual who matters; both patient and caregiver. All else pales in comparison. The strength of this story is in relationships with students, physicians, other nurses, patients, families and most importantly with Nepal itself. There is a sense of community connectedness which the author brings alive as the reader becomes one with the story. The heartbreak and grief of death to the celebrations of life will elicit those same emotions. The thread through it all is the author's own journey as he discovers himself and renews his spirituality. The reader is immediately pulled into the drama and nakedness, and the beauty and mystery of this incredible part of the world. Ellen L. Bridge, RN, BS, MTS Public Health Nursing Consultant

"Counseling Clients Near the End of Life is a marvelous resource for mental health providers who are searching for useful information in areas such as the following: resolving ethical dilemmas; assisting clients in planning for the end of life; counseling caregivers of clients who are near the end of life; and assisting people in dealing with grief. The editor of this work, Dr. James Werth, has done a splendid job of gathering various experts to share their perspectives on end of life care and choices at this time of life--and he has also written an excellent chapter on counseling clients who are dying." Gerald Corey, EdD, ABPP Professor Emeritus of Human Services and Counseling California State University, Fullerton This highly accessible guide to counseling people who are terminally ill and their families fills a critical need in the counseling literature. Written for front-line mental health professionals and counseling graduate students, the text integrates research with practical guidance. It is replete with the experiences of contributing authors who are leaders in counseling terminally ill individuals , real-life case examples, clinical pearls of wisdom, and tables of practice pointers that provide quick access to valuable knowledge. The text offers information that is requisite for all counselors who provide services to persons who are terminally ill and their families. It

addresses common issues that influence different types of counseling approaches, such as how the age, ethnicity, or religion of a client affects counselor conceptualizations and actions. The book discusses how to manage symptoms of depression, anxiety, and cognitive impairment near the end of life. It explains how advance directives can be used to assist dying individuals and their loved ones. The counseling needs of family members before and after death are addressed as well as counseling loved ones experiencing complicated grief. The text also examines the particular concerns of counselors regarding self-care and the benefits of working as part of a professional team. Woven throughout are important considerations such as cultural diversity, ethical challenges, laws, and regulations; and advocacy at client and social policy levels. Readers will also benefit from the inclusion of additional references for more in-depth study. What should medicine do when it can't save your life? The modern healthcare system has become proficient at staving off death with aggressive interventions. And yet, eventually everyone dies—and although most Americans say they would prefer to die peacefully at home, more than half of all deaths take place in hospitals or health care facilities. *At the End of Life*—the latest collaborative book project between the Creative Nonfiction Foundation and the Jewish Healthcare Foundation—tackles this conundrum head on. Featuring twenty-two compelling personal-medical narratives, the collection explores death, dying and palliative care, and highlights current features, flaws and advances in the healthcare system. Here, a poet and former hospice worker reflects on death's mysteries; a son wanders the halls of his mother's nursing home, lost in the small absurdities of the place; a grief counselor struggles with losing his own grandfather; a medical intern traces the origins and meaning of time; a mother anguishes over her decision to turn off her daughter's life support and allow her organs to be harvested; and a nurse remembers many of her former patients. These original, compelling personal narratives reveal the inner workings of hospitals, homes and hospices where patients, their doctors and their loved ones all battle to hang on—and to let go.

Why does it cost nonprofits on average \$20 to raise \$100, while it costs companies only \$4? Simply put: Nonprofits have no leverage. No one has to make a donation. And since most donors have no direct stake in the organizations they support, they make donations out of the goodness of their hearts. If donors feel like writing a check, they will. If they don't, they won't. The End of Fundraising turns fundraising on its head, teaching nonprofits how to stop begging for charity and start selling impact. For the first time, nonprofits have economic power. We live in a new era where consumers, businesses, investors, employees, and service providers attach real economic value to social outcomes. An era where yesterday's "feel good" issues—education, the environment, health care, the arts, and animal rights—now have direct economic consequences and opportunities. Nonprofits now have leverage. To use this leverage, nonprofits must learn how to "sell" their impact to a new set of stakeholders. Using his fifteen years of experience advising the world's leading nonprofits, foundations, and corporations, Jason Saul reveals the formula for how nonprofits transcend the paradigm of charitable fundraising and reach true financial sustainability. Specifically, this groundbreaking book offers nonprofit professionals a guide to

Understand the role of social change in our economy
Capture and communicate impact in simple, compelling terms
Identify the new market stakeholders that value nonprofit outcomes
Create powerful value propositions to increase leverage
Improve the success of a nonprofit's pitches to

This book is meant to be a healing source of support.

And a Time to Die

This report examines the scale and quality of end of life care; the current and future approach to commissioning and funding of services; and the capability and capacity of NHS and social care staff to provide such care. In England approximately half a million people die each year. Around three quarters of deaths follow a period of chronic illness, such as cancer or heart disease, where people may need access to end of life care. End of life care services seek to support those with advanced, progressive, incurable illness to live as well as possible until they

die. The provision of end of life care is becoming increasingly complex, often requiring a complex mix of health and social care services. End of life care is delivered by many people, including families and friends, specialist palliative care staff, and generalist staff such as doctors, nurses and social workers, for whom end of life care represents a varying proportion of their role. There are no full estimates of the full financial cost of end of life care, but in 2006-07 primary care trusts estimated they spent £245 million on specialist palliative care, delivered by around 5,500 staff with specific training in the management of pain and other symptoms. Most people would prefer not to die in hospital but a lack of NHS and social care support services means that many people do so when there is no clinical need for them to be there. The Department of Health published its End of Life Care Strategy in 2008 which commits additional funding of £286 million over two years, and aims to increase the availability of services in the community and develop the skills of health and social care staff.

At the End of Life

As Justice Louis Brandeis suggested more than a century ago, privacy--the right to be left alone--is the most valued, if not the most celebrated, right enjoyed by Americans. But in the face of computer, video, and audio technology, aggressive and sophisticated marketing databases, state and federal "wars" against crime and terrorism, new laws governing personal behavior, and an increasingly intrusive media, all of us find our personal space and freedom under attack. In *The End of Privacy*, Charles Sykes traces the roots of privacy in our nation's founding and Constitution, and reveals its inexorable erosion in our time. From our homes and offices to the presidency, Sykes defines what we have lost, citing example after example of citizens who have had their conversations monitored, movements surveilled, medical and financial records accessed, sexual preferences revealed, homes invaded, possessions confiscated, and even lives threatened--all in the name of some alleged higher social or governmental good. Sykes concludes by suggesting steps by which we might begin to recover the territory we've lost: our

fundamental right to our own lives.

The End of an Era

The Ancient Hebrew scriptures are many thousands of years old. However, these influential texts still have the potential to influence our daily lives profoundly as well as to shape world events. *About the Time of the End* is a new book that seeks to examine biblical narratives pertaining to Ancient Hebraic roots while juxtaposing them with scientific findings in the areas of archeology and evolutionary genetics. Author Anaviel Ben Eleazer originally composed the chapters that comprise the book as a series of individual essays. In compiling them into a book, it is his hope that the reader will be presented with an alternate view of biblical history and a new understanding of Ancient Hebraic scripture. The book is written from the informed perspective of someone who has lived in a Hebrew community in Israel for nearly four decades. *About the Time of the End* presents nuanced views on a variety of biblical subjects and employs a new perception and understanding that's based on a deep appreciation of the Hebrew language and the Ancient Hebrew lexicon in particular. Anaviel Ben Eleazer was born in Atlanta, GA and raised in Detroit, MI. However, since 1974 he has lived in Israel, where he raised his family in the Negev town of Arad. While also running his own entertainment-booking agency, he has authored numerous articles and other short pieces over the years. *About the Time of the End* is his first published work.

Organizational computing has been critical to the development of medical informatics. Many end user applications (EUAs), such as FileMaker Pro, have been applied to support medical staff work at hospitals in Japan recently. This e-book describes how to use FileMaker Pro with hospital information systems (HISs). EUAs are described with relation to tools used for development, their functions, coordination methods with HIS, how to use them, their effectiveness, and their problems. While not all of the applications fulfill complete requirements for RASIS,

and are not established, they give us new perspectives regarding HISs. This e-book also provides readers with various suggestions on how to use HISs more effectively, how to coordinate EUAs with HIS, how to manage end user applications, and how to achieve clinical effectiveness with EUAs. This volume is specialized in the use of FileMaker Pro at hospitals and all of the developers of FileMaker Pro systems. The respective authors are medical doctors at various departments of hospitals in contrast to conventional developers who are usually unfamiliar with medical information requirements. These two features make this e-book more clinically significant and facilitate end users to handle HISs more easily.

The Statutes at Large from the Magna Charta [to the End of the Eleventh Parliament of Great Britain, Anno 1761 Continued to 1806]

The seventeenth century witnessed profound reforms in the way French cities administered poor relief and charitable health care. New hospitals were built to confine the able bodied and existing hospitals sheltering the sick poor contracted new medical staff and shifted their focus towards offering more medical services. Whilst these moves have often been regarded as a coherent state led policy, recent scholarship has begun to question this assumption, and pick-up on more

localised concerns, and resistance to centrally imposed policies. This book engages with these concerns, to investigate the links between charitable health care, poor relief, religion, national politics and urban social order in seventeenth-century France. In so doing it revises our understanding of the roles played in these issues by the crown and social elites, arguing that central government's social policy was conservative and largely reactive to pressure from local elites. It suggests that Louis XIV's policy regarding the reform of poor relief and the creation of General Hospitals in each town and city, as enshrined in the edict of 1662, was largely driven by the religious concerns of the kingdom's devout and the financial fears of the Parisian elites that their city hospitals were overburdened. Only after the Sun King's reign did central government begin to take a proactive role in administering poor relief and health care, utilizing urban charitable institutions to further its own political goals. By reintegrating the social aspirations of urban elites into the history of French poor relief, this book shows how the key role they played in the reform of hospitals, inspired by a mix of religious, economic and social motivations. It concludes that the state could be a reluctant participant in reform, until pressured into action by assisting elite groups pursuing their own goals.

Hospital Cost Analysis provides an overview of theoretical developments in the economic analysis of production and costs in the multiproduct firm, and discusses

these developments. Following a lucid explanation of the concepts of jointness, input/output separability and returns to scale, a detailed discussion of the concept measurement and classification of hospital output is provided. A fundamental dilemma confronting economists interested in estimating hospital cost functions is highlighted, viz. the trade-off between flexibility in functional form and homogeneity within hospital output categories. Empirical results on the effects of case mix, scale and utilisation, public/private ownership, and the centralised administration of hospital systems on hospital costs are presented. The implications of hospital cost analysis for public policy with respect to hospital payment schemes, including schemes based on Diagnosis Related Groups (DRGs), are also considered. This book brings together the literature on hospital cost analysis with theoretical developments in the analysis of the multiproduct cost functions. It will be of considerable interest to teachers and students of health economics and health policy advisers interested in the determinants of hospital costs and the design of hospital payment schemes.

Now the site of luxury, high-rise apartment buildings, condominiums, and stores, Boston's West End was once the site of many Bulfinch-designed townhouses owned by prominent families. In later years, the neighborhood was home to a diverse ethnic and religious community of families who arrived in Boston from all parts of the world. Today, three decades after the West End was virtually leveled, it is still fondly remembered by many who once called it home.

Journey to the End of the Night

Most Americans, when pressed, have a vague sense of how they would like to die. They may imagine a quick and painless end or a gentle passing away during sleep.

Get Free The Hospital At The End Of The World

Some may wish for time to prepare and make peace with themselves, their friends, and their families. Others would prefer not to know what's coming, a swift, clean break. Yet all fear that the reality will be painful and prolonged; all fear the loss of control that could accompany dying. That fear is justified. It is also historically unprecedented. In the past thirty years, the advent of medical technology capable of sustaining life without restoring health, the expectation that a critically ill person need not die, and the conviction that medicine should routinely thwart death have significantly changed where, when, and how Americans die and put us all in the position of doing something about death. In a penetrating and revelatory study, medical anthropologist Sharon R. Kaufman examines the powerful center of those changes -- the hospital, where most Americans die today. In the hospital world, the deep, irresolvable tension between the urge to extend life at all costs and the desire to allow "letting go" is rarely acknowledged, yet it underlies everything that happens there among patients, families, and health professionals. Over the course of two years, Kaufman observed and interviewed critically ill patients, their families, doctors, nurses, and other hospital staff at three community hospitals. In *And a Time to Die*, her research places us at the heart of that science-driven yet fractured and often irrational world of health care delivery, where empathetic yet frustrated, hard-working yet constrained professionals both respond to and create the anxieties and often inchoate expectations of patients and families, who must make "decisions" they are ill-prepared to make. Filled with actual conversations between patients and doctors, families and hospital staff, *And a Time to Die* clearly

Get Free *The Hospital At The End Of The World*

and carefully exposes the reasons for complicated questions about medical care at the end of life: for example, why "heroic" treatment so often overrides "humane" care; why patients and families are ambivalent about choosing death though they claim to want control; what constitutes quality of life and life itself; and, ultimately, why a "good" death is so elusive. In elegant, compelling prose, Kaufman links the experiences of patients and families, the work of hospital staff, and the ramifications of institutional bureaucracy to show the invisible power of the hospital system itself -- its rules, mandates, and daily activity -- in shaping death and our individual experience of it. *And a Time to Die* is a provocative, illuminating, and necessary read for anyone working in or navigating the health care system today, providing a much-needed road map to the disorienting territory of the hospital, where we all are asked to make life-and-death choices.
