waveguide optics. It concludes with a detailed discussion on refractive index and its dependence on compositions, density, temperature and stress. The relationship of these properties in controlling bulk optical properties is especially emphasized. The main emphasis of Chapter 5 is on the methods of thin film fabrication using physical and chemical vapour deposition and on pulsed laser deposition including ion implantation techniques. Chapter 6 starts with the classical radiative transition theory based on dipole models, and then explains the concept of dipoles and electron-phonon coupling. Emphasizing various quantum mechanical rules, it then discusses the radiative, non-radiative, energy transfer and upconversion processes. Finally, chapter 7 covers the photonic device applications of inorganic glasses, fibres and waveguides and concludes with a short discussion on the emerging opportunities in future for inorganic glasses"--
