Library of Universal Knowledge

This is perhaps the most complete, detailed and readable story of manned space-flight ever published. The text begins with the historical origins of the dream of walking on the Moon, covers the earliest Mercury and Gemini flights and then moves on to the end of the Apollo era. In readable, fascinating detail, Hamish Lindsay - who was directly involved in all three programs - chronicles mankind's greatest adventure with a great narrative, interviews, quotes and masses of photographs, including some previously unpublished. In addition to bringing the history of these missions to life the book serves as a detailed reference for space enthusiasts and students.

English Mechanic and World of Science

The conquest of Earth's moon was merely a precursor to a more dramatic step forward, which will take men and women to an outpost that might eventually become a second home for the human race. Mars: The Next Step illustrates how the only feasible colonization of another planet in our solar system will be on Mars. The author addresses the various questions surrounding this theory with frank scientific caution that in no way obscures his vigorous enthusiasm and, above all, optimism for mankind's future in space. This vivid and entertaining book explores "terraforming" (planetary engineering), which could turn Mars into a more congenial environment for humans, both in terms of changing the harsh climate of the planet and the production of plants able to thrive there by means of genetic engineering. The book includes numerous diagrams of possible manned spacecraft, along with color pictures of Mars taken on previous unmanned missions.

Nature

I have spent many wonderful nights observing at a variety of places around the world, but many of my fondest memories come from those made at the Custer Observatory in Southold on Long Island, where I grew up. I was only perhaps a dozen years old when I started out, and now more than three decades later I have logged millions of miles on the various telescopes there. Some of the best memories are of observing and discussing astronomical topics with the many really terrific people who make up Custer. It truly holds a special place in my heart. Star clusters were always among my favorite objects to observe and discuss there. This book is the result of the exposure to these objects, many of which I observed for the first time at Custer. The Custer Institute Observatory was founded in the 1920s by local resident Charles W. Elmer of Perkin-Elmer Corp. fame. The original crew met at his house in Cedar Beach a few miles down the road from the institute. In the 1930s the group built an observatory complete with Mr. Elmer's donated 5" Alvan Clark refractor. Later the observatory expanded to include a 6" Clark refractor and other even larger instruments.

An entrepreneur's journey is full of ups and downs. They need to learn fast, and the only way to do that is to fail fast, and another way is to learn from other people's mistakes. If you want to shorten the learning curve, then you should definitely read this book. This book guides entrepreneurs and especially the wannabe tech-entrepreneurs to help them "navigate life more smoothly." This book throws light on: - Few tech startup opportunities that are still unexplored. - How to handle financial and emotional health. - How to deal with VCs. Next Orbit of an Entrepreneur is a must-read for first-time entrepreneurs.

Star Clusters

Includes complete texts or abstracts of lectures delivered before the Society, minutes of meetings, directory of members, and annual accounts.

An Elementary Treatise on Dynamics

This work investigates the permissibility and viability of property rights on the -
lestial bodies, particularly the extraterrestrial aspects of land and mineral
resources ownership. In lay terms, it aims to find an answer to the question "Who

owns the Moon?" The first chapter critically analyses and dismantles with legal arguments the issue of sale of extraterrestrial real estate, after having perused some of the trivial claims of celestial bodies ownership. The only consequence these claims have on the plane of space law is to highlight the need for a better regulation of extraterrestrial landed property rights. Next, the book addresses the apparent silence of the law in the field of extraterrestrial landed property, scrutinizing whether the factual situation on the extraterrestrial realms calls for legal regulations. The sources of law are examined in their dual dimension – that is, the facts that have caused and shaped the law of extraterrestrial real estate, and the norms which express this law. It is found that the norms and rules regarding property rights in the celestial realms are rather limited, failing to define basic concepts such as celestial body.

English Mechanics and the World of Science

Renaissance man " discovered many a mechanical marvel . The achievement of the astronauts " opened up comparable prospects to the men of today, but of infinitely wider scope". C. LUCET, French Ambassador to the United States.· "Any future must inevitably pass through the channel of combined disciplines (from

which) will arise a humanization of state-of-the-art technology, and updating of methods of Earth Science." Author unknown.· "It is difficult to say what is impossible, for the dream of yesterday is the hope of today and reality tomorrow." ROBERT GODDARD, American physicist. This phrase has become the symbol of NASA . • Is there a crisis of the spirit?, Bu/. Soc. Prof. Fr. en Amer. (1969) p. 9. *. La recherchespatiale [Space Research] (May 1969) p. 15. INTRODUCTION FROM GALILEO TO ALDRIN AND ARMSTRONG In 1610, Galileo observed the surface of the Moon through the lens which bears his name and announced that, contrary to official opinion, its surface was irregular and not smooth. We now know that this observation -and many others of Galileo-was a correct one, but the opposition that always arises against research too far ahead of its time resulted in his condemnation.

Next Orbit of an Entrepreneur

The global meltdown, the concomitant demise of legendary corporate behemoths, and the challenge of competing in a world marked by unprecedented complexities, volatility, discontinuities, and ambiguities, have pushed discussions on survival and excellence to the forefront. Towards the Next Orbit: A Corporate Odyssey brings forth ideas, experiences, studies, insights, and suggestions from renowned theoreticians and practitioners towards changing and succeeding in a new world. The first part of the book comprises rich conceptual papers and research-based empirical papers written primarily by thought leaders from all over the world. The second part comprises dialogs with persons who are well known in the business landscape as "change masters." The chapters discuss cutting-edge ideas in the areas of corporate behavior, positioning, growth, leadership, employee relations, and so on. Together, the articles and interviews will help readers develop perspective, cognitive framework, behavioral repertoire, and portfolio of practices for making the transition from simply functioning to achieving excellence.

* Details how a succession of Salyut space stations led to the development of Mir. * Depicts Mir's assembly piece by piece, in space, between 1982 and 1996. * Describes how Mir became an international research laboratory. * Advises how Mir technology went on to form the 'core modules' of the ISS. * The definitive account of Mir throughout its life through to de-orbiting in March 2001.

Who Owns the Moon?

Read Online Towards The Next Orbit A Corporate Odyssey

For those interested in the human conquest of space and exploration of the planets, Martin Turner describes the challenges that will be presented by the next "giant leap" in the human exploration of our Solar System--a return journey to the Red Planet. The author begins by describing how the very latest rocket propulsion and spacecraft technology, and planned developments in nuclear and electric propulsion technologies, are the key factors that will enable a human expedition to Mars. Of particular importance are the challenges of transporting cargo to Mars and in providing necessary life support for the crew, including supply of consumables, such as food, water, air and fuel, for the return journey.
